AUCTION!

Saturday, March 21

at 1 P. M.

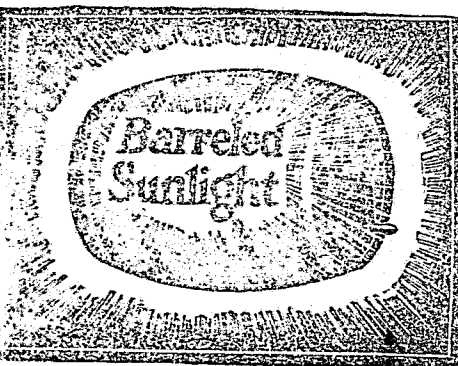

at the Ida Gammon Place

East Waterford

Sale includes stock of Ida Gammon: 7 young cows, 3 yearlings, 1 male hog, 3 brood sows, 9 small pigs, 3 shoats, 150 hens, 11 ducks and 1 drake.

RAYMOND L. GAMMON, Prop.

D. M. STUART, Auctioneer.

A Bright Cheerful Kitchen

For the real mother and home-maker the kitchen, nursery and bathroom rank as the most important rooms in the house, not only in sanitary arrangements but in beauty and comfort. White walls and woodwork should be kept a pure white in order to maintain most bright and cheerful surroundings. Barreled Sunlight is the ideal interior white paint for this purpose. It is cheaper than enamel and much easier to apply, can be washed and won't need repainting for years. Contains no lead or varnish and dries with a hard, beautiful gloss.

Enjoyed Birthday Party

Little Miss Esther Pike entertained a party of friends, Saturday afternoon from two until four, in honor of her seventh birthday.

Games were played and in a peanut hunt, Miss Beatrice Gallant won the prize for finding the most peanuts. Iva Yates secured the lucky prize for the least number. Miss Lucy Kimball pinned the tail on the donkey and received a nice prize for her skill.

Refreshments included pineapple sherbet, saltines, candy, peanuts and two birthday cakes.

Among the number present were Marion Moore, Virginia Frost, Iva Yates, Arlene Woodworth, Eleanor Aldrich, Elizabeth Perry, Viola Brown, Beatrice and Mildred Gallant, Lucy Kimball, Rosalie, Courtney and Leslie Pike, Little Maisie Klein, Richard Klein and the hostess, Miss Elliott, who is the little hostess' school teacher was also a guest. Charles Chick and Mrs. Dennis Pike called in the midst of the festivities to extend greetings.

Soft weather brings Harry Lovejoy with red boots on to the street. Donald Andrews is out West this week, purchasing horses.

The pay roll at the "little shop," Norway Shoe Co., is almost \$6,000.00 per week.

Mrs. Irene Luck has returned from a visit with her sister, Mrs. Marjorie Chamberlain, in Worcester, Mass.

OXFORD

Installation of Craigie Lodge No. 21, Deputy Grand Chancellor Herbert A. Rich, Jr., and staff, including Jesse P. Edwards, Grand Master of Arms; Rolfe Witham, Grand Vice Chancellor, all of Norway installed the following officers of Craigie Lodge No. 21 for the ensuing year:

C. W. E. Gammon,
V. C. George Keen,
M. W. Charles Bumpus,
M. W. W. A. Faunce,
K. of R. and S. W. A. Lane,
M. E. B. Holden,
M. E. B. Holden,
I. G. C. D. Miller,
O. G. H. A. Andrews.

William A. Faunce, a Civil War Veteran, died at his home in Oxford, Saturday, March 7. He was born in Poland, Dec. 24, 1866. He served in Co. C of the 17th Maine Regiment, was wounded in the battles of Gettysburg and Wheatfield. He leaves a nephew, W. H. Faunce of Atlantic City, N. J., and two nieces, Mrs. Margaret Frances and Mrs. Alice Scribner of Friday Harbor, N. Y. He was the oldest male citizen in town. Funeral was held from his late home on the Poland road, Tuesday at 1 P. M., to the Poland road, Tuesday evening. Services were in charge of Elmer Anderson Post American Legion. There were also representatives from T. A. Roberts Post, W. R. C. and the Ladies Auxiliary. Among the floral tributes were those from the Legion, Ladies Auxiliary, T. A. Roberts Post and W. R. C. Interment was at Riverside Cemetery, Oxford.

There will be an auction of live stock and farming tools at Oxford town farm, Saturday, March 21.

Archibald Poole has finished working for the Oxford Woolen Co. and his brother, William Poole, has taken his place.

Mrs. Mabel Greenlaw has been called to Raymond to attend the funeral of her uncle, William E. Jodrey.

The Ladies' Aid of the M. E. church gave a public supper, Wednesday, from 5 until 7 P. M. It was largely attended and the proceeds were pleasing.

Chas. Moulton is very ill with the grip. Ray Hall is steadily improving.

The Fidelity Class of the M. E. church were pleasantly entertained, Tuesday evening by Mrs. Chas. Bumpus.

P. O. French and Hollis Kemp were in Lewiston the first of the week.

H. G. O. Perkins is holder of the Post card being the oldest man in town.

A helpful sermon was given Sunday morning at the Congregational church by Prof. Chase of Bates College. His subject was "The Story of the Stars."

Sunday he will speak on "The Record of the Stars."

Mrs. Louise Wood was hostess at the Lendahand Club, Tuesday evening.

Maystelle and Inez Farris, Nellie Willis, Winola Bonney and Winifred Martin were at home for the week end.

Miss Annie Fuller was awarded the Lincoln Bronze Medal offered to the Senior class of Oxford High School by the Illinois Watch Co. of Springfield, for the best essay on the life of Lincoln.

The last meeting of the Neighborhood Club was at the home of Mrs. Nettie Lapham. Each lady wore a poverty costume. High scores were won by Mrs. Ben Lapham, consolation, Grace Davis. A surprise was given when the hostess summoned the guests to luncheon which was served from tin cups and plates.

The selectmen have recently appointed John Ordway, S. O. Dudley and Wellington Twitchell a fire wardens.

Mrs. William E. Dow of Falmouth, Maine was a recent guest of her father, W. S. French.

The Senior class of O. H. S. will hold a sale March 17 at the High School rooms.

The Fore Street will meet with Mrs. John Grover, March 19.

A. Hill of Norway plastered for Al Twitchell, Monday.

Mrs. Ernest Talbot has been ill the past week.

Albert Thompson was in Portland, Sunday, and Mrs. Albert Thompson and Janet were guests at Oxford village.

An auction will be held at the Ida Gammon place, East Waterford, Saturday, March 21, at 1 o'clock, D. M. Stuart, auctioneer.

CARD OF THANKS

We wish to thank our friends and neighbors for their kindness and sympathy shown us in our recent bereavement and for the beautiful floral tributes.

MRS. AND MRS. W. G. LANE,
West Paris, Maine.

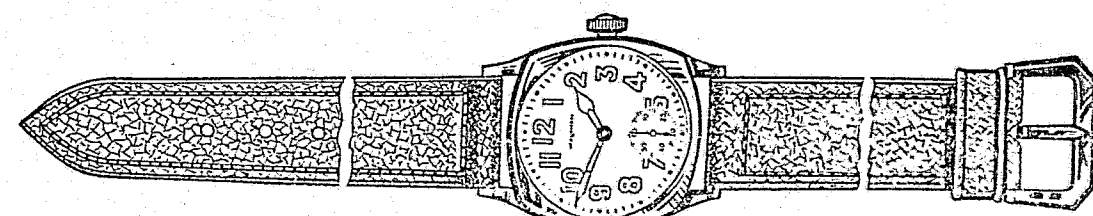

RESOLUTIONS OF RESPECT

SOUTH WOODSTOCK

Gaydon Davis is working in Mann's mill at West Paris.

Mrs. G. W. Q. Perham was called to Sanguis, Mass., last Friday by sickness in the family of her daughter, Mrs. Mildred Woodsum.

Mrs. Frank Davis was in South Paris last Saturday.

F. E. Davis & Son and Emil Heikkinen have been making maple syrup.

Mrs. Albert Felt and son, Lester, have the mumps.

Bernice Verrill has gone to Locke Mills to work for Mrs. Alice Farrington.

Ben and Shirley Wilson have moved to the Bemis place.

School began in the Perkins District, Monday. Marion Davis of Paris is the teacher and boards at Abner Benson's.

Dorothy Newell of Sumner is working for Mrs. Avery Knox.

Mrs. Andrew Rose is in poor health this winter.

Mrs. Addie Buck finished work at Geo. Tuttle's and returned home, Wednesday.

Mrs. A. R. Hendrickson and Myrtle were week end guests at Fred Thurlow's, Pigeon Hill.

Mrs. Emma Perham is working for Edwin Mann at West Paris.

Nelson Whitman spent the week end at his father's at West Paris.

Mrs. and Mr. Albert Russ entertained several friends, Saturday evening, in honor of Mrs. Russ' birthday. Those present were Mr. and Mrs. Harry Swift, Mr. and Mrs. Geo. Chisham, Mr. and Mrs. Fred Noyes. The evening was spent with cards. Refreshments were served and a very pleasant evening enjoyed.

BRYANT POND

Miss Jennie Green went to Oxford and spent the week end with her sister, Mrs. Della Smith.

Abner Mann went to St. Barnabas Hospital, Saturday night and Mrs. Mann returned home with him to West Paris. She is gaining nicely now.

Mrs. Minnie Jordan and Mrs. Wallace Whitman went to Lewiston, Saturday.

Frederick Muller, who has been visiting his mother, Mrs. Pearl Muller, has returned to Boston.

Alden Hayes of South Paris was in town, Saturday.

Franklin Grange held their regular meeting Saturday, March 7th. A fine program was enjoyed. Thirty members were present.

Mrs. Arthur Andrews and Alice spent the week end at South Paris.

Misses Gertrude Perham and Margaret Dudley are home from Gorham Normal School over the week end. Miss Ruth Murray came with them and is visiting Miss Perham.

Mrs. Alice Harrar and daughter, Mrs. Florence Benson, went to Norway, Thursday night.

Miss Nathalie Thurlow went to Mechanic Falls and spent the week end with her uncle, Amos Thurlow and wife.

FRYEBURG CENTER

Mrs. Clara Hastings

Deceased, Feb. 26th, 1925. Gone West, over the Purple Hills to beyond the softly glowing rim of Life's Day. The spirit took its flight across the white archway of moonlight down the beautiful sunset. Mrs. Clara Hastings, widow of Randall Hastings, who passed beyond many years ago, passed away very suddenly at her home on Thursday morning, Feb. 26. She was a member of the Grange at Fryeburg Center and Rebekahs and Ladies' Social Circle. She was a kind and will be greatly missed by her friends. She leaves two sisters, Mrs. Emma Erickson of this place and Mrs. Loring Erickson of Chatham, N. H., other close connections are the Franks and family of Portland, John Smith and family of Massachusetts and Mrs. Nellie Stevens of California, besides a large number of nieces and nephews.

Services were held at her home on Sunday afternoon with Rev. W. A. Smith attending clergyman. The floral pieces were beautiful, attesting to the high esteem in which she was held.

The earthquake on Saturday evening, Feb. 28th, was rather startling and caused quite a little excitement in the place but no damage was done, only giving several people the impression that they were having bad spells.

Mrs. Alice Webb has spent the past week with her daughter, Ada Hammond, who has been confined to her bed with a grip cold, but is better at this writing.

Mrs. Percy Jones has been sick the past week.

EAST STONEHAM

Mrs. A. E. Nelson and daughter Christine are spending a few days in South Waterford with her husband's parents.

Mrs. Ada L. Hill, who has been spending the winter in Norway with Mr. and Mrs. Jesse Edwards, is at home.

Edith Merrill is spending a few days with Mrs. Herman Holt at North Waterford.

S. A. Stearns is able to be out around again after several weeks' illness.

Carroll Curtis has gone to Albany to visit relatives in Portland the past week. Miss Stearns has been doing her shopping preparatory to going to Washington, D. C.

Frank Murdoch of Norway has been repairing the engine at the Oxford Box Co. mill the past week. He went home Monday morning, with Roger Adams in his auto.

Mrs. J. C. Files, Mrs. Blanche McKean and Mrs. C. D. Blackford were called to North Stoneham, Monday, by the sudden illness and death of their father, William Adams.

There was a large attendance at the sewing bee held by the Ladies' Aid Society in the home of Mrs. Nettie McAlister, on Thursday last. A large amount of clothing was repaired and some new made for a large family of small children whose mother is, and has been for some time, very ill. Also a large box of food was sent them.

BROWN, BUCK & CO.

Smart Styled Spring

Coats and Dresses

that give distinction and individuality. The discriminating woman will find many styles to suit her individual taste in our Spring collections. Altho the straight line silhouette predominates, it takes on many forms. Colors and fabrics are greatly diversified, trimming effects are varied so that you can choose whatever gives you the most distinction and individuality.

Wooltex and Shagmore

two advertised makes that offer unusual quality at moderate prices. Colors, tans, browns, and red browns predominate, with rosewood, green, apricot, silver greys among the lighter shades. Coats for Misses and regular sizes priced \$12.50, \$16.50 and up to \$47.50. Stylish stout coats priced \$16.50 and up to \$39.50.

New Spring Fabrics

Vividly beautiful colorings and highly original patterns distinguish the new group of Spring fabrics we have in stock for your choosing. Nearly all the colors especially in wash fabrics are guaranteed this season. Prices moderate, 29c, 50c, 69c, \$1.00.

Mail Orders

If it is hard to visit the store during the hard traveling, write, or if in a hurry, telephone 92-11 and let one of our salespeople shop for you, all orders go out on the next mail.

Basement Store

Kitchen utensils, dishes, 10c counters, novelty goods, stationery and glass ware fill this big showroom. Prices unusually low.

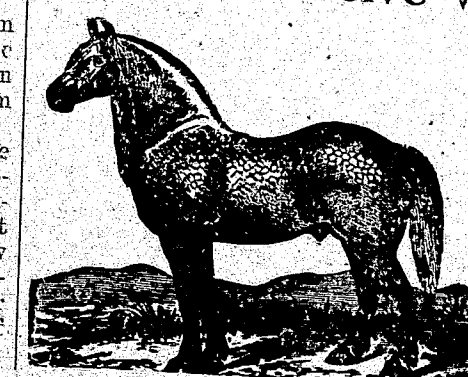

Shall Receive Wednesday, March 11

23 Head Horses

Right from Iowa. The right kind and the right prices. Good farm chunks and weighing from 1200 up.

EAST FRYEBURG
F. M. Sanborn has been on a hiking
trip of ten days visiting friends and re-
latives in Denmark, Hiram, Baldwin, Car-
michael, Parsonsfield, Limington and Lim-
erick.
The maple syrup makers are all busy.
Mr. and Mrs. Bennett Moulton of Den-
mark and Fred Walker of Boston have
been recent visitors at the Walker home.
Rather discouraging reports are com-
ing from Portland regarding the condi-
tion of E. B. Warren who is at the Maine
General Hospital.
A large delegation attended the Po-
mona meeting at Fryeburg, Friday.
The East Fryeburg Grange held their
sixth anniversary meeting Friday evening
with appropriate exercises, considering
the traveling there was a good turnout.
In the past six years the grange has
expended in buying land, ground, improv-
ments and equipment, \$50,000.00 and are
practically out of debt.
Mr. and Mrs. Clarence Osgood were
Sunday guests at E. W. Pike's.
Dana Libby and Wilton Warren attend-
ed the automobile show in Portland, the
latter going to Boston for a visit before
returning home.

South Paris

(Continued on Page 5)

High School News

Themes written by Mary Slattery and
Merton Parsons were sent to the Port-
land Evening Telegram to be published in
the Master's Making Column on March 8.
Mrs. Harold Fletcher has contributed
the March copy of the Nature Magazine
to the South Paris High School Library.
Miss Helen Weston spent the week end
of March 6-8 in Lewiston and Miss Mar-
jorie Manser spent the week end at her
home in Auburn.

Friday, March 13, South Paris High
School debating teams are speaking in
the debates of the Bates Interscholastic
League. At South Paris the affirmative
team opposes Stephens High School. The
debate will be held in the Assembly
room of the High School beginning at
8:00 o'clock. A small admission will be
charged to defray expenses for debating.
The members of the local affirmative
team are Charlotte Cole, Mary Slattery
and Ruth Brown, alternate. The nega-
tive will go to Turner to debate Leavitt
Institute. On this team are Henry
Swett, Edythe Kerr and Martha Burrows,
alternate. The question for debate is
"Resolved, that the United States should
recognize the Soviet Government of Rus-
sia."

South Paris High School was for the
first time represented in the Annual In-
terscholastic Indoor Track Meet at
Brunswick, held on Saturday, March 7.
Local boys who made the trip are Rupert
Aldrich, Oayma Colby, Harry McGinley,
Clarence Bumpus, Matti Lundell, Harland
Knight. Aldrich competed in the 100
yard dash, one mile and relay. Colby in
600 yard, one mile and relay. McGinley
in 600 yard run and 1000 yard run.
Bumpus in 40 yard dash, 300 yard dash,
relay and broad jump; Lundell in 300
yard dash and 600 yard run and relay.
Knight in 40 yard dash, 300 yard
dash and relay.

The girls' basketball schedule was
completed on Saturday, The Stars won
played at Bryant Pond next Friday and
that game completes their schedule.
Baseball candidates will be called Mon-
day, March 16.

Children's Night will be observed by
Mt. Pleasant Rebeccah Lodge at the next
regular meeting on March 13. Refresh-
ments will be served and a good time is
assured.

The Community Club meeting Thursday
afternoon, March 24, at 2:30 will be a
matinee musicale by the Maria Trio com-
prising Josefa Martin, violin; John Scrut-
ton, cello; Miss Mabel McGibbon, piano.
Rev. H. G. McGinlay has returned
from the Deaconess Hospital in Boston
improved in health but not yet able to
assume the duties of the church. Sun-
day morning services will now be held
with Deaconess Packer of Portland sup-
plying the pulpit next Sunday. She has
been doing pastoral work during Mr. Mc-
Ginlay's absence.

Miss Rona I. Beebe, the milliner, has
been in Boston on business.
This will be a dance at Association
Hall this Friday evening, March 13. Mu-
sic by Shaw's orchestra of 4 pieces.

Shaw's dance at Mechanic Falls, Satur-
day night was well attended and another
will be held there next Saturday night.
The ladies of the Congregational
church will serve a Cafeteria supper on
Thursday, March 12, from 6:15 to 7:30.
The menu will include cold lamb, escalop-
ed potatoes, chicken pie, fruit salad, wel-
sh rabbit, lobster roll, baked beans, hot
rolls, doughnuts, lemon pie, custard pie,
apple pie with ice cream, cake, creaming
and cheese, coffee, tea, ginger ale. Fol-
lowing the supper an entertainment en-
titled "Sweethearts in Song" will be
given. The Junior orchestra will play
and a reading will be given. Anyone
whose supper amounts to 45 cents or
over will be given an entertainment tick-
et.

NORTH BRIDGTON

Club Notes

The Kozy Korner Klub met at Alice
Crockett's house, March 6. Ten members
were present, the meeting was opened by
the president, Frances Ward. The roll
call was given by the secretary. There
were two members absent, three visitors
were present. Leader, Mrs. Holden, told
of a class which she was invited to at-
tend in Portland. The social hour was
enjoyed with music and refreshments.
The next meeting will be held at the
home of Eva Holden, March 20.

Bridgton Academy Notes
Principal Sampson of Bridgton Aca-
demy read the names of the students
whose names are upon the honor roll for
the first half of the winter term, in chapel,
recently. This roll is posted twice each
term, after the mid-term examinations
and at the end of the term. There was
only one student in school who received
high honors, which is a grade from 95 to
100 average. This boy was George Los-
er of Otisfield. Those receiving honors
in a grade of 90 to 95 were Ralph Per-
kins of North Waterford, Shirley Harmon
of Harrison, Bertha Towne of Portland,
Saint Pulkkinen of Harrison, June Brown,
of Albany, Lillian Millett of Waterford,
James Friesbe of North Bridgton, Robert
Sanderson of Waterford, while those get-
ting honorable mention or a grade of 85
to 90 were Crockett of North Bridgton,
ton, Celia Witham of Harrison, Herbert
Callahan of Waterford, Aurielle Losier of
Otisfield, John Graham of Boston, Mass.,
Leroy Hersey of North Waterford, Leigh
Finn of Millinocket, Edwin Gupill of
Baldwin, Jennie Mackie of Waterford,
Leona Skillings of Bolster's Mills, Eva
Mackie of Waterford and Charles Hill of
Hiram. Out of this list three are Seniors
and four are Juniors, eleven Juniors, three
Sophomores and six Freshmen, making
twenty-two out of a student body of one
hundred and twenty.

The Junior debates: "Resolved, that
the United States should recognize the
present Soviet Government of Russia." Af-
firmative, Eva Mackie, Warren Stew-
art, James Friesbe; Negative, Jennie
Mackie, John Dillingham, Alton Crock-
ett.

ALBANY

Hunt's Corner and Vicinity
Mrs. Wm. Adams, who is in a hospital
in Portland, was operated on Monday,
March 2. Word has been received that
she is recovering rapidly.

George Briggs bought a Jersey cow of
Abel Andrews, recently.
Will McAllister purchased a Jersey
heifer of Abel Andrews.

Mr. and Mrs. E. C. Cummings was a visit-
or of Mr. and Mrs. Irving Beckler, Satur-
day.
Mr. and Mrs. Abel Andrews were call-
ers of George Briggs and family, Wednes-
day.

Maitland Bird was in Rumford, Fri-
day, with a well calf and other farm pro-
duce.

The nineteenth annual Farmers' Week
at the College of Agriculture, Orono,
will be held March 31, April 1, 2 and 3.
It is expected that several hundred
men and women from rural Maine will
gather to discuss the problems of agri-
culture and home making.

Ripley & Fletcher Co., South Paris,
have a line of used Fords to sell. Look
up their ad in this paper, for it tells the
story.

No Cross Words For Us In The Daytime.

The fad of trading new words for
old is not upsetting the scheme of
things at Fuller's.

We are not racking our brains to
find a new horizontal word for "Style."

We are not nibbling our pencils to
conjure up a short letter term for long
values.

To us "You" are still in three letters
—all Capitals—and a fair price is still a
low price.

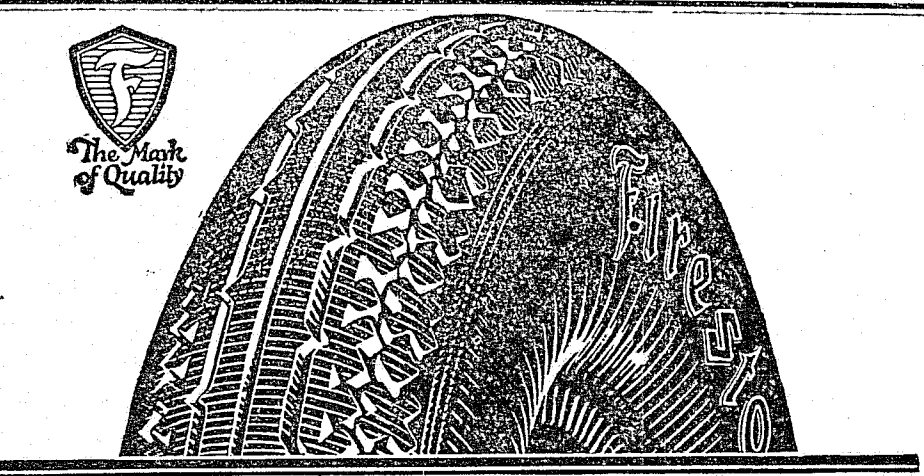

No Cross Words here for us in the
daytime.

No Cross Words from you—when
you get home.

CLEANING AND PRESSING. WE
GUARANTEE OUR WORK.

THE FINEST ESSEX EVER BUILT \$895

Freight and Tax Extra

You Cannot Get Equal Style, Performance and Reliability Within Hundreds of Dollars of its Price

Essex is a totally different type. Its advantages are exclusive because patented. It gives results never before attained in any car:

Low price, without disappointment in looks or reliability.

Economy without sacrifice of performance.

Stability and highest roadability without unnecessary weight.

The riding ease of large, costly cars. The handling ease of a bicycle. Utter simplicity in design.

The lowest maintenance cost, we believe, of any car in the world.

Hudson-Essex. Largest Selling 6-Cylinder Closed Cars in the World

SOUTH PARIS

AS GOVERNOR OF MASSACHUSETTS

Calvin Coolidge lived in a modest, two-story frame house said to rent for about \$40 a month. He has carried his principles of economy, both personal and governmental, into the highest office in the land.

President Coolidge is setting an example of good money management which could well be studied and followed by ambitious people.

EUGENE ANDREWS, Norway, Me.

WATERFORD
Mrs. Lennie Smith and daughter, Harriet, of Portland are making Mrs. Rex Rounds a short visit. Miss Smith has been in poor health for several weeks and she hopes the change will do her good. Mrs. Jewett is poorly and has been confined to her bed for some time. Mrs. Hubbard returned home last Thursday from a visit to Waterford where she has been helping care for Flora Abbott who had an infected hand caused by a burn.

Charles Lockwood, who has been spending the winter at the Dudley's, has gone to Boston and New York to spend two weeks with his friends and relatives. Those having radios had a fine treat last Wednesday listening to the President's speech.

The V. I. S. held their whist at Mrs. Freeman Haggood's, Thursday, March 12. There were three tables. All had a nice time. The next meeting will be at the hotel music room, Friday evening, March 13.

We are sorry to hear that Lennie Pitts, our stage driver for many years, has lost the use of his legs from a fall at Waterford. He has always been very obliging and made many friends. Francis Frisbee had the best bid for the mail.

NORTH WATERFORD

William Ansel Coffin
William Ansel Coffin, son of Ansel and Harriett (Heald) Coffin, born at North Lovell, Me., Nov. 19, 1852, died in his home at Charlestown, Mass., March 5th, 1925, at the age of 72 years, 3 months and 16 days. He leaves to mourn their loss, a wife who was Laura Mosher and two sons, Ansel and Melvin, besides his aged mother who resides in North Waterford. He was a member of the First Baptist Church, a member of the Grand Lodge, and an older brother, Melvin, of Rosinade, and two sisters in Los Angeles, Mrs. Cora Seavey and Mrs. Lella Kimball, and many other relatives. For over forty years he has been a machinist at the Howard Mfg. Co., where he was working when taken sick. His death was caused by cancer of the stomach.

Mr. and Mrs. Charles Marston are at Norway for a few days.

Mr. and Mrs. Gerald Harding and Albert Page have moved back to Norway. Annias McAllister was an invited guest at Harry Brown's, Saturday, in honor of his birthday. Mrs. Brown had a birthday cake the day before so she made a delicious birthday cake with their names and dates on it and all partook of it with other goodies for dinner.

Aunt Hattie Heald has received the sad news of the death of her son, Will Coffin, at his home in Massachusetts.

Mr. and Mrs. Ezra Lebrake were invited guests at the home of Ernest Grover's, it being Mrs. Lebrake's birthday. Mrs. Grover made a fine birthday cake covered with candles.

Mrs. Leslie Hobson's boarders have gone away as they have finished work. Dell Kilgore was a Sunday guest of his daughter, Mrs. Wallace Jones. His granddaughter, Isabelle Jones, went home with him for a visit.

Mr. and Mrs. Clarence Kimball are stopping at Merle Morse's.

Rice Neighborhood

George H. Rice and family and Mr. and Mrs. C. A. Hersey attended the Farm Bureau meeting at South Waterford last Friday. The meetings are very helpful and they would like to have more from the north end of the town attend.

Mr. and Mrs. C. P. Saunders spent Wednesday at Frank Morse's. Miss Elvira Hamlin spent the same day with Miss Wilkins at Waterford.

Delbert Kilgore of Norway called on his daughter, Mrs. Wallace Jones, on Sunday.

Alfred and Alvin Hersey went Monday to Norway to visit their aunt, Mrs. Everett Bradford. Mr. Bradford came home with them.

WEST STONEHAM

Mrs. John Adams has returned from visiting relatives in North Fryeburg.

John D. Grover has leased H. B. McKee's farm for the summer and moved his family there. Willis Warren has moved his family from North Lovell into Mr. Grover's house.

Mr. and Mrs. W. A. Hersey and daughter, also Mr. and Mrs. Wilbur Button and son spent the week end at North Waterford.

Mrs. Lee Andrews of North Lovell and Rose Stanley are helping Mrs. John D. Grover get settled since Mr. Grover has moved his family from North Lovell into Mr. Grover's house.

Mr. and Mrs. W. A. Hersey and daughter, also Mr. and Mrs. Wilbur Button and son spent the week end at North Waterford.

Mrs. Knox Bickford, son Knox, Jr., and daughter, Mary, visited her sister, Mrs. John Grover, last week.

Burnham Rice and Leonard Doughty came to "Slide Inn" Sunday night to work W. W. A. Hersey.

Mr. and Mrs. Willis Warren took dinner, Sunday, with her father and sister, William and Josie Adams.

EAST OXFORD

Theresa M. Brown of Bryant Pond spent the week end with her friend, Mrs. Stanley Pratt, assisted by Mrs. Morse.

Mr. and Mrs. Stanley Pratt, Theresa Brown, A. K. Thomas, Mr. and Mrs. Henry Bridges, Calvin Morse and Arthur M. Thayer attended the entertainment at the No. 7 schoolhouse, Saturday evening.

Mr. and Mrs. Charles K. Denning of Pigeon Hill were the guests of her sister, Mrs. Geo. H. McKee, recently.

Miss Marian Burnham, who has been the guest of her sister, Mrs. Wallace Ripley, for a week, has returned to her home in Rosinade, Mass. accompanied by Mrs. Ripley.

About sixty attended the drama and sociable at the Caldwell schoolhouse, Saturday evening. There will be another entertainment March 14.

Mrs. Henry Judd spent Thursday at Mrs. Wallace Ripley's.

One of Wm. E. Morse's horses got kicked and cut quite badly, Sunday night. A veterinarian was called and sewed up the wound.

PIGEON HILL

Herbert and Will Mayberry have been cutting pine for Elmo King and are now cutting for Percy Wilson, timber which he bought of Charles Jordan.

W. H. Clark moved his mill from Mechanicsville. It is situated on the old Sanborn farm, now owned by Fred Thurlow. Mr. Wilson plans to do his sawing and buy enough to make 300,000.

C. K. Denning has purchased a Myers power sprayer of Kendall & Whitney, of Portland.

Mr. and Mrs. C. K. Denning spent Sunday at the home of Mrs. Denning's sister, Mrs. G. H. McKee.

Mrs. Lilla King spent ten days in Auburn, visiting her son, James King, recently.

Philip King was in the Twin Cities, last week.

Mrs. Addie Jordan, who has been ill for a few days, is better now.

MILTON

The Larkin Club met with the Secretary, Edith Jackson, Feb. 27, this being the last order of the old club. The new club was formed with the following members, Florence Merrill, Daisy Buck, Mildred Buck, Ella Wilson, Edith Poland, Addie Lapham, Edith Jackson, Villa Sessions, Cora Millett, Basha Akeley. This club meets once a month with one of the members and fine times are enjoyed by all.

Clara Jackson and a friend from Rumford spent the week end with her parents, Clarence Jackson and wife.

Regarding Our Presidents

Editor of Oxford County Advertiser:

That brief history of our presidents by Don Seitz, formerly of the Advertiser now of the New York World, is well worth reading. I judge this was written during an acute bilious attack. There is surely a display a genius in this off-hand, jaundiced-colored sketch of our presidents, great and small, wise and otherwise.

To Mr. Seitz, Washington was no good as a President. How sorry I am. I had thought he was not brilliant as an aggressive general, for in 1812 he had been I had felt that he would have captured Cornwallis before he reached Yorktown. But he pursued the tactics of Quintus Fabius and captured the bird anyway.

I had a little idea that Washington sailing an uncharted sea, with our somewhat turbulent forefathers, instead of making himself a King or Dictator like Cromwell and others, at the expiration of his second term he insisted on retiring to private life, and established the precedent of only two elective terms in office. I had an idea that Washington, the rich old man in America, was the cause of the "The Great Unwashed" instead of that of the King and all the aristocracy in the two countries, who with him would have easily won and bestowed on him all possible honors. After prosecuting that grinding war for seven years, it is quite possible that such cartoons as appeared in at least one of the leading papers, representing the head of Washington falling into the basket of the guillotine, while they accused him of attempting to make himself king, got on his nerves, and some times it is possible he was beset by misgivings and human doubts, but he kept the ship of state to its true course, and as long as the world stands, will be recognized as one of the world's great men.

How masterfully he condenses on his history of William McKinley, "Nominated by Mark Hanna. The war with feeble Spain to 'free' Cuba, to please William B. Hearst, was his doing. No body is proud of that war.

Too bad that the most of us poor, misguided mortals all over this world have been so terribly in error. Personally I had a faint idea that Cuba and the Philippines were much better off and that Cuba did not now supply us with her annual infection of yellow jack in our southern ports. Also I had supposed that with hundreds of years of typical Spanish misrule, with many years of rebellion and indescribable atrocities culminating with the sinking of our battleship Maine with more than two hundred men and officers, it really seemed to me that we had reason to go to war with the pleasing of W. R. Hearst. And being that said Hearst was not even a Republican or a friend or supporter of McKinley, we don't recall that he counted for much except that the rabid Anarchistic attacks of said W. R. Hearst was supposed to have incited Coolidge to the assassination of McKinley.

Says Mr. Seitz, "Theodore Roosevelt was a circus in the White House. The Constitution took a vacation. Roosevelt gave it a rest. Also the House and Senate." It surely was no vacation for the House and Senate, Mr. Seitz. Ask them if it was. You are right. Theodore Roosevelt and the American people got along fine, and your pet Demo. Donkey and likewise the G. O. P. elephant had a real "circus time." You and your N. Y. World should have put a stop to him before. You and the many and the G. O. P. machine had had experience with him as Police Commissioner of New York. Also as Governor of your State. Once in a while a man has got by the politicians and the press and got where the people see them as they are and then as did Platt and the G. O. P. they rode in on the tail-end of the band wagon of Theodore Roosevelt.

Now comes the real valuable part of Mr. Seitz's article.

No man, unless he is a genius, can in so few words give a comprehensive history of three presidents and their administration, as does Mr. Seitz. Beginning with Mr. William Howard Taft.

It is quite possible that however great the genius may be, in order to give the most accurate and comprehensive account of those both Republican and Democratic administrations, one should have the jaundice or at least some subtle bilious disturbance, at least he will be sick when he comprehends how far we have fallen from the beginning of the Taft administration to the present moment, from Lincoln's aphorism "Government of the people, by the people, for the people."

Four years of either one convinced the American people that they wanted no more of either. However the Bourbon blindness and stupidity of the Republican machine, so offended the American people that they would have nothing of either Hughes or Wilson if it could have been helped. We should say that Hughes lost, and not that Wilson won. The lost, and not that Wilson won. The lost, and not that Wilson won. The lost, and not that Wilson won.

Let us hope and pray that Calvin Coolidge when he retires, will not merit Mr. Seitz's description of a "mean little Yankee." Also let us hope that he does not approve William N. Butler's hostility to the direct primary.

Mr. Butler is a member of the Republican National Committee. Butler has been one of President Coolidge's political promoters since he first entered the political arena.

His attitude toward the direct primary should be carefully watched.—R. L. Cummings, West Paris, Me.

BANGOR MAN'S MUSCLES WERE TIED UP IN KNOTS

That's The Way Harry Messer Says Rheumatism Made Him Feel—But Karnak Brings Complete Relief

Such statements as the following from Mr. Harry E. Messer, 469 Main St. Bangor, Me., should appeal to the thousands of Maine and New Hampshire people who suffer from the same troubles.

"If anyone had sworn to me until they were black in the face I wouldn't have believed it possible for any medicine to have done what this Karnak has done for me. Why, it has relieved me completely of a bad case of rheumatism from which I had been suffering for ten years and which nothing else would even help. I suffered torture day and

night. My knuckles were swollen twice their normal size and my hands were so stiff I couldn't close them tight. This rheumatism ran up through my arms and was in both my legs, and my muscles just seemed tied up in knots. Sharp pains would shoot through my body at every move, and it was with the greatest effort that I kept on the job. I was also a sufferer from indigestion and bloating, was terribly nervous and weak.

"You can just imagine how surprised I was when this Karnak not only set my stomach right, but made a clean sweep of the rheumatism as well. The swelling, soreness and pain has left me entirely, and I am like a new man all over. I don't know what it is, but there is something about Karnak that certainly does the work."

Karnak is sold in Norway exclusively by Frank P. Stone, and by the leading druggist in every town.

More milk and less cost

That sounds too good to be true, but we have customers claiming that and others claim same results as on rations costing \$6.00 to \$15.00 per ton more.

Try Economy Feed on your own cows, at our expense if it fails. This ration provides the essential minerals in their most digestible form, and we are convinced that the 20% protein it contains will give as much milk as any 24% ration on the market.

Think what it saves you.

Ephrata, Pa., October 9, 1924.

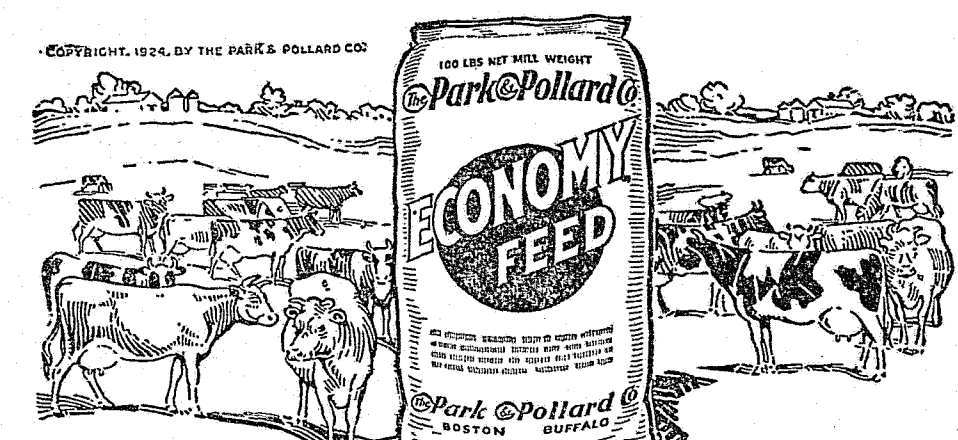

The Park & Pollard Co., Inc.,

I have been feeding all kinds of 24% protein for years.

When I heard of your ECONOMY FEED with fish and mineral, it seemed too good to be true. After feeding for two months I can see my cows taking on flesh and the milk production is as high as ever.

I cannot recommend it too highly, and know that a trial will convince the most skeptical feeder.

"YOUR SILKS, CREPES AND WASH GOODS ARE SO GOOD LOOKING"

Many women remark as they pass down through the Piece Goods Department these days and when they know the price, often the reply is "Isn't that reasonable." You, yourself, might be impressed the same way if you did as many others have. You're always welcome to look to your heart's content here without any obligation, (and that's no figure of speech either.)

NEW MERCHANDISE

We have a splendid lot of new merchandise in the way of Coats, Dresses, Underwear, Hosiery, Sweaters and Piece Goods for your inspection and selection if you wish.

Two of the Newest Fashion Notes from Paris

Design 8124—The inserted section at the front and back of this dress, together with the belt, require 1/2 yard of 39-inch material, while the dress itself requires only 2 1/2 yards of 54-inch material in size 40. The Belrobe shows you with pictures how to lay out the Standard-Designer Pattern. Get your pattern and material at our store to-day.

NORWAY,

MAINE

NOBLE'S CORNER

A Surprise Party was given at the home of Mr. and Mrs. Percy Upton, Friday evening, in honor of Rose Upton, to celebrate her birthday. The evening was pleasantly passed with music and social chat. Refreshments of ice cream, cake and fancy crackers and cigars were served. Mr. Upton was the recipient of some useful gifts.

At a late hour the jolly party broke up. Those present were Mr. and Mrs. Charlie Herrick, Mr. and Mrs. Guy Curtis, Mr. and Mrs. Irving Symonds, Mr. and Mrs. Percy Russell and son, Charles, Mr. and Mrs. Wanda Upton and children, Dorothy and Linwood Gately, Will Symonds, Maud Bennett, Carl Upton and daughter, Violet.

Several from this vicinity attended the Farm Bureau meeting held at Norway Grange Hall last Saturday.

Mr. and Mrs. Percy Upton and children, Dorothy and Linwood Gately, spent Sunday at Oliver's at Norway.

Mr. and Mrs. Alfred Jackson of Madison were guests, Thursday and Friday, of Mr. and Mrs. Oscar Cox.

Roland and Percy Upton are cutting wood for Olin Upton.

Mr. and Mrs. Merle Merrill visited at Guy Ingalls is doing some carpentering for J. F. Symonds.

The Neighborhood Nine Club enjoyed their weekly meeting, Monday, at the home of Mrs. Oscar Cox. The afternoon was passed in the usual way. Light refreshments were served. Seven members were present. Mrs. Percy Russell will entertain next Monday.

Mr. and Mrs. Benjamin Tucker were guests at Will Tucker's the first of the week.

Mrs. Eunice Watson has been ill with the prevailing cold.

Mr. and Mrs. J. S. Smith are both better from their recent illness.

Miss Gladys Smith was a week end guest at Webster Kilgore's.

Dr. Harold Bachelard won the cake at the Penny Social and cake walk held at the Mothers' Club hall, Saturday night.

Dr. and Mrs. C. A. Stephens went to Boston, Thursday morning.

NORTHWEST NORWAY

C. P. Upton has finished cutting birch for the Merrill Bros. and is cutting pine for Carroll Greenleaf for a few days.

Mr. and Mrs. J. S. Smith are both better from their recent illness.

Miss Gladys Smith was a week end guest at Webster Kilgore's.

Dr. Harold Bachelard won the cake at the Penny Social and cake walk held at the Mothers' Club hall, Saturday night.

Dr. and Mrs. C. A. Stephens went to Boston, Thursday morning.

NORTH NORWAY

Ned Cox entertained the grip several days last week.

Amos Foster is having five calves. We have not seen them we dare say they are good ones.

Mr. and Mrs. Horace Hussey are contemplating having a piazza built on their new future.

Pupils who received 100 per cent. for perfect spelling for the week ending March 6, Violet Upton, Dorothy Gately, Jerro Cox, Ray Whitman, Arthur Morse. This gives Arthur Morse a record of 100 per cent. in spelling for four successive weeks.

Flint, N. H. Roberts, 502 Asylum St., Flint, Mich., wrote: "My little girl, Mary, has been very sick. In a letter I wrote: 'Baby is fine and it was your'.

BATES—WEST PARIS

Mrs. Narcissa W. Chesley

Mrs. Narcissa W. Chesley passed away at the home of her daughter, Mrs. W. H. Whitman, Feb. 27, at the age of 94 years, 8 months and 21 days. She was the widow of the late J. M. Chesley, a civil war veteran.

The greater part of her life she resided in Buckfield and Hebron, 23 years ago they moved to Auburn where Mr. Chesley passed away some years ago at the age of 91. To them were born three children, Mrs. Marietta Ricker of N. Auburn, who died nearly ten years ago, George F., who resides in Auburn and Mrs. Whitman on High St., where she has been for the last three years and been confined to her bed.

She has been cared for by her daughter, Mrs. Whitman, and her son, George F. Chesley. She has been confined to her bed most of the time since having bronchitis in April of last year. Her going was peculiar as she went into a deep sleep Thursday morning and slept on until the end. She was a woman of sterling character and much respected where she lived.

The funeral was held Monday, March 2, at the home of her son, George F. Chesley. Interment in Mt. Auburn cemetery.

Charles D. Purington died last Friday, March 6. He has been in failing health for the past two or three years. He was a civil war veteran, having enlisted in Co. B, 5th regiment, New Hampshire Volunteer Infantry in July, 1862, and served nearly three years. His company came home to Concord, N. H., and he came to visit his family before the discharge was given. His company was in the battle of Gettysburg and he was in all the engagements of it and in his later years loved to relate the incidents of it.

He was born in Sandwich, N. H., Aug. 24, 1842, son of Harriet Atwood and John Purington. He married Elizabeth Parker, Nov. 22, 1863. They lived in Madison and Dunbar, N. H., moving to Milton, Me., about twenty-two years ago. They came to West Paris in the fall of 1916.

They had one son, Augustus E. Purington, who lives in Tamworth, N. H., and one daughter, Persis, wife of William G. Lane, who has always lived with her parents.

Mrs. Purington died Oct. 2, 1919. He has one brother who survives, Alpheus W. Purington of Colebrook, N. H. Mr. and Mrs. Purington united with the Baptist Church while living in Madison, N. H.

The funeral was held Sunday at 1 p. m., at his late home. Rev. E. H. Stover officiated assisted by Rev. E. B. Forbes. The burial song "Rock of Ages" and "The City Four-Square."

Agnes Gray and friend, Helen Weston of South Paris spent the week end with Nellie Nichols in Lewiston.

Fred Cash went to the C. M. G. Hospital and was operated on for appendicitis. His family are living in a camp on Greenwood St., owned by the late Ezekiah Farrar. Rent is given to the hospital.

Leonard Chesley and Osgood Swan are better at the C. M. G. Hospital for treatment.

Mrs. Ina Smith, who was recently operated on for appendicitis, had to return to the C. M. G. Hospital where she has had a successful operation for adhesions.

Last Sunday evening four young ladies who went to the Young People's Conference at South Paris, gave their reports from it: Elizabeth Bane, "Devotion"; Margaret Lane, "Keeping Together"; Doris Richardson, "My Class"; Mae Briggs, "Organized Class".

The young people gave a very interesting account and showed the conference to be of great benefit to our young people.

Christian Endeavor last Sunday evening at 6 p. m. was led by Mae Briggs. The subject for next Sunday evening is "Preparation for Winning Others to Christ."

Beatrice Smith of Mechanic Falls visited friends here over the week end.

Mrs. Helen Ham and daughter, Ernest of Auburn, came here to spend several days with her sister, Mrs. Devine.

Mrs. Decoster, who has been here, returned to her home in Norway.

Mrs. Elden Ganey and little daughter, Lola, of St. Sumner, visited Mrs. L. M. Mann, last week.

Granite Chapter O. E. S. will have a supper at 6:30 Thursday evening.

Supper will be given in the evening. The men serve the supper.

The Parent-Teacher Association meeting Monday evening was not very well attended. The president, A. T. Hollis, had a sore throat and was unable to attend. They day evening.

A. T. Hollis had a hard attack of neuralgia around the heart last Friday night. He is better now.

The Helping Hand Class had a social at the home of Mrs. Sadie Patch last Friday night. The program was a sketch of Presidential inaugurations. Chester Gates of Norway sang two songs which were appreciated. Laura McKen gave a piano solo. Games were played. Refreshments of sandwiches, croquettes and punch were served.

The Library Association held a special meeting Tuesday evening at the library. A good attendance was present. The call was to save future means and plans. L. C. Bates was present and presented some \$500.00 bonds to the president in memory of Mrs. Bates at her request. A rising vote of thanks was given him.

BETHEL

On Tuesday evening, March 3, Deputy Grand Chancellor Herbert A. Rich, Jr. of Pennsylvania, Lodge No. 18, and Grand Prelate John E. Everett of Hamlin Lodge No. 31 installed the officers of Suburb Lodge No. 22, the installation being public. The following officers for the ensuing year were installed:

C. C. L. Sumner.
V. C. H. G. Rowe.
M. W. L. Burbank.
M. W. L. Burbank.
E. of K. and S.—G. Cushing.
M. E. Jordan.
M. E. Jordan.
M. E. Jordan.
M. E. Jordan.
M. E. Jordan.

Grover Hill

Mrs. Clyde L. Whitman has been ill with her sister, Mrs. Bertha Harding, is better.

Evelyn Lyon was the week end guest of her friend, Evelyn Whitman.

Mrs. H. M. Kendall and son, Anson of Bethel, from Sunday River were guests at Fred Munn's for a few hours one day last week.

Merle Swan from Bethel was the week end guest of Mr. and Mrs. M. F. Tyler. Maurice Tyler has nearly completed his teaming for the season.

A. J. Peaslee from Bethel was in the place calling on friends, Sunday.

Mr. and Mrs. Chas. Lyon from Bethel were guests of Harry Lyon and family at the farm, Sunday.

Malcolm Munn, who has been ill with tonsillitis, is able to attend school again. Payson Philbrook is rather poorly this winter.

LOCKE'S MILLS

The girls of the Alder River Up and Doing Club held a meeting at the school of the day. Songs were enjoyed and refreshments of fudge were served.

Norway and Vicinity

Mr. and Mrs. Dana Wight of Glen and Mr. and Mrs. James Wight of West Paris, Me. Alvin C. S. Rimmer and daughter, Mildred of Portland attended the funeral of Mrs. Mary Wight on Tuesday.

Fourteen Past Noble Grand of the Hope Rebekah Lodge were entertained at South Paris, Tuesday evening. The evening was enjoyable.

O. W. Brown of Lynn, Mass.: "I am out of the stream and ponds, but guess there hasn't been any fishing because of high water. Trout fishing not allowed until April 15. Am still with the Herald and it looks as if I am to have a busy summer, with Caldwell and his staff at Swampscott, although at the Washington correspondents will come along with him. I pulled the first story over that it was definitely settled. I present it to you as the most of his vacation in this State—had it on page 6 of the Herald last Monday morning, with description of the houses to be used by himself and party. Do not see many Norway people here now. In fact, I am Paragard, who lives only a couple of blocks from my house. I haven't seen in nearly six months. We are all well and hope to get down to Norway this year, but can't tell whether it will be this spring or early fall."

Dates for the American Legion Minstrels are April 23-24. Rehearsals are putting the show into professional shape with something different from the regular stereotyped stuff passed over the footlights by many shows of this type. Late dates have been selected, trusting drama nature will provide dry roads for automobiles. Miles without means means "staying only" and a wealthy box office.

Miss Ruth Graves and her mother have moved from Pine street, South Paris, into the upstairs apartment at the Swift house on Paris street.

Maple syrup is peddled about the village and brings \$2.50 per gallon. The run of sap was good until checked by zero weather early in the week.

Patrons at Greenleaf's Cafe enjoyed eating in an open air dining room, Monday, while carpenters ripped away the front during repairs on the building.

Capt. Mel Simpson and "Beagle" Dunmore reported observing bear tracks crossing the lake to Bass Island then westward to the mainland. Capt. Simpson added that this is the first summer guest to arrive and the season is not a guess.

Another dance will be held at the memory this Thursday evening. Old and new dances will be offered. Company will use the profits at their camp next summer.

Some less than a foot of damp snow arrived Saturday to revive the debilitated sledging and stimulate trade in rubber boots. Some fine snow scenes were photographed of trees, grasses bent to the ground under the weight of snow.

"Picture Bill" is in Springfield, Mass. hard at work in the play line. He sent us a card.

Arsene Blaquiere cut a gash in his thumb while splitting wood. He was holding the stick on a block when the handle caught and the accident resulted. Two stitches were taken.

Norway Lodge No. 16 I. O. O. F. visit Mt. Meigs Lodge No. 17 at South Paris, Thursday evening, March 19. First degree will be conferred on candidates from Norway Lodge. Lunch at the work. Bus service from Norway 7 o'clock and from South Paris after the meeting. A large attendance is urged for an enjoyable evening is promised. Mrs. Billy White is home from a visit with relatives in Boston, Haverhill and other Massachusetts cities. She has been away two weeks and enjoyed the attending the various theatres. White also spent several days in Haverhill and other places.

Rev. N. R. Pearson preached at Deering Memorial Church, South Paris, Sunday morning. Deaconess Packer of Portland occupied the pulpit at the Norway Methodist Church.

Rev. O. L. Stone conducted the service at the South Paris Baptist Church, Sunday.

Among those who attended Ladies' Night of Kora Temple at Portland were Mr. and Mrs. Albert J. Stearns, Mr. and Mrs. Hugh Penick, Mr. and Mrs. Stuart W. Goodwin and Mr. and Mrs. Stephen O. Jellerson.

Eldith Joslin and Hilma Russell are expected home Saturday from Emerson College of Expression for the Easter holidays.

The initiatory degree will

THE TOPOGRAPHIC MAPS OF THE UNITED STATES

The United States Geological Survey is making a standard topographic atlas of the United States. This work has been in progress since 1882, and its results consist of published maps of more than 40 per cent of the country, exclusive of outlying possessions.

This topographic atlas is published in the form of maps on sheets measuring about 16 1/2 by 20 inches. Under the general plan adopted the country is divided into quadrangles bounded by parallels of latitude and meridians of longitude. These quadrangles are mapped on different scales, the scale selected for each map being that which is best adapted to general use in the development of the country, and consequently, though the standard maps are of nearly uniform size, they represent areas of different sizes. On the lower margin of each map are printed graphic scales showing distances in feet, meters, and miles. In addition, the scale of the map is shown by a fraction expressing a fixed ratio between linear measurements on the map and corresponding distances on the ground. For example, the scale 1:62,500 means that 1 unit on the map (such as 1 inch, 1 foot, or 1 meter) represents 62,500 similar units on the earth's surface.

Although some areas are surveyed and some maps are completed and published on special series for special purposes, the standard topographic surveys for the United States proper and the resulting maps have for many years been divided into three types, differentiated as follows:

1. Surveys of areas in which there are problems of great public importance—relating, for example, to mineral development, irrigation, or reclamation of swamp areas—are made with sufficient accuracy to be used in the publication of maps on a scale of 1:62,500 (1 inch = one-half mile), with a contour interval of 1, 5, or 10 feet.

2. Surveys of areas in which there are problems of average public importance, such as most of the basin of the Mississippi and its tributaries, are made with sufficient accuracy to be used in the publication of maps on a scale of 1:125,000 (1 inch = nearly 1 mile), with a contour interval of 10 to 25 feet.

3. Surveys of areas in which the problems are of minor public importance, such as much of the mountain or desert region of Arizona or New Mexico, are made with sufficient accuracy to be used in the publication of maps on a scale of 1:250,000 (1 inch = nearly 2 miles), with a contour interval of 25 to 100 feet.

A topographic survey of Alaska has been in progress since 1906, and nearly 37 per cent of its area has now been mapped. About 10 per cent of the Territory has been covered by reconnaissance maps on a scale of 1:250,000 or about 10 miles to an inch. Most of the remaining area surveyed in Alaska has been mapped on a scale of 1:125,000, but about 4,000 square miles has been mapped on a scale of 1:62,500.

About half of the Hawaiian Islands has been surveyed, and the resulting maps are published on a scale of 1:62,500.

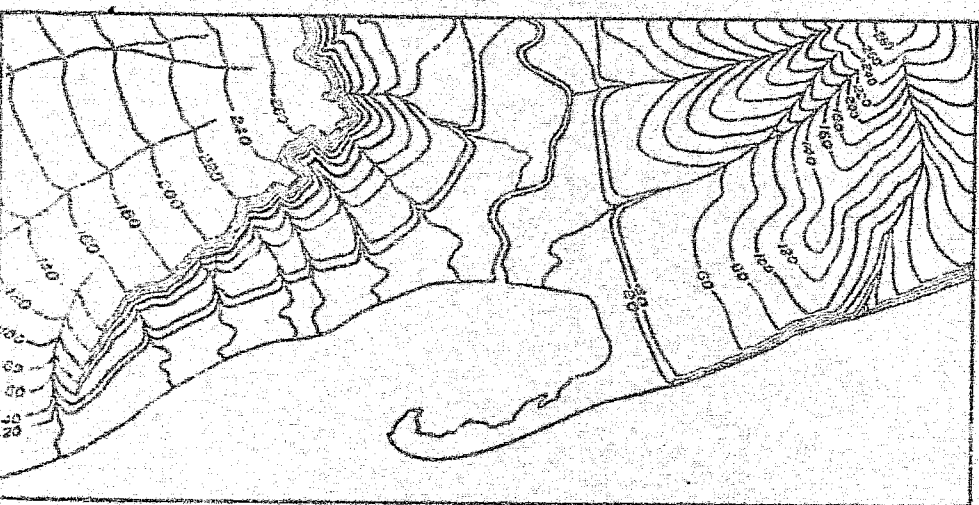

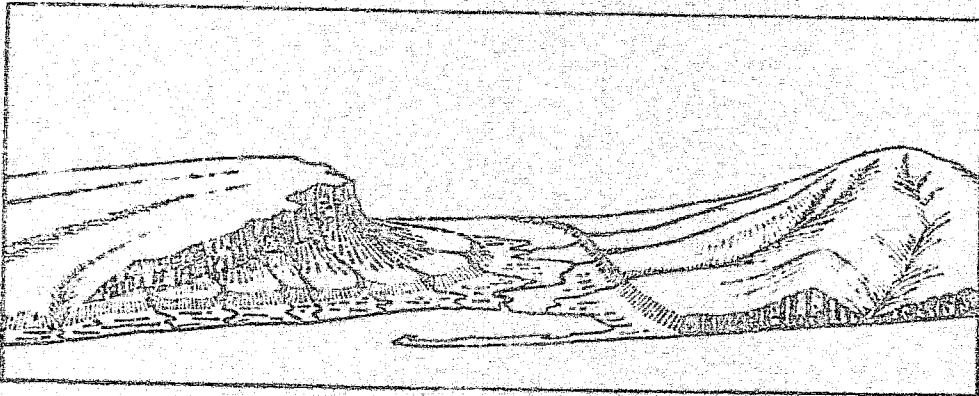

The features shown on these maps may be arranged in three groups—(1) water, including seas, lakes, rivers, canals, swamps, and other bodies of water; (2) relief, including mountains, hills, valleys, and other features of the land surface; (3) culture (works of man), such as towns, cities, roads, railroads, and

boundaries. The conventional signs used to represent these features are shown and explained below. Variations appear on some earlier maps, and additional features are represented on some special maps.

All the water features are represented in blue, the smaller streams and canals by single blue lines and the larger streams, the lakes, and the sea by blue water lining or blue tint. Intermittent streams—those whose beds are dry for a large part of the year—are shown by lines of blue dots and dashes.

Relief is shown by contour lines in brown, which on some maps are supplemented by shading showing the effect of light thrown from the northwest across the area represented, for the purpose of giving the appearance of relief and thus aiding in the interpretation of the contour lines. A contour line represents an imaginary line on the ground (a contour) every part of which is at the same altitude above sea level. Such a line could be drawn at any altitude, but in practice only the contours at certain regular intervals of altitude are shown. The line of the seacoast itself is a contour, the datum or zero of altitude being mean sea level. The 20-foot contour would be the shore line if the sea should rise 20 feet. Contour lines show the shape of the hills, mountains, and valleys, as well as their altitude. Successive contour lines that are far apart on the map indicate a gentle slope; lines that are close together indicate a steep slope; and lines that run together indicate a cliff.

The manner in which contour lines express altitude, form, and grade is shown in the figure below.

The sketch represents a river valley that lies between two hills. In the foreground is the sea, with a bay that is partly inclosed by a hooked sand bar. On each side of the valley is a terrace into which small streams have cut narrow gullies. The hill on the right has a rounded summit and gently sloping spurs separated by ravines. The spurs are truncated at

their lower ends by a sea cliff. The hill at the left terminates abruptly at the valley in a steep scarp, from which it slopes gradually away and forms an inclined table-land that is traversed by a few shallow gullies. On the map each of these features is represented, directly beneath its position in the sketch, by contour lines.

The contour interval, or the vertical distance in feet between one contour and the next, is stated at the bottom of each map. This interval differs according to the topography of the area mapped: in a flat country it may be as small as 1 foot, in a mountainous region it may be as great as 250 feet. Certain contour lines, every fourth or fifth one, are made heavier than the others and are accompanied by figures showing altitude. The heights of many points—such as road corners, summits, surfaces of lakes, and bench marks—are also given on the map in figures, which show altitudes to the nearest foot only. More exact altitudes—those of bench marks—as well as the geodetic coordinates of triangulation stations, are published in bulletins issued by the Geological Survey.

Lettering and the works of man are shown in black. Boundaries, such as those of a State, county, city, land grant, township, or reservation, are shown by continuous or broken lines of different kinds and weights. Metalled roads are shown by double lines, one of which is accentuated. Other public roads are shown by fine double lines, private and poor roads by dashed double lines, trails by dashed single lines.

Each quadrangle is designated by the name of a city, town, or prominent natural feature within it, and on the margins of the map are printed the names of adjoining quadrangles of which maps have been published. Over 3,000 quadrangles in the United States have been surveyed, and maps of them similar to the one on the other side of this sheet have been published.

The topographic map is the base on which the geology and mineral resources of a quadrangle are represented, and the maps showing these features are bound together with a descriptive text to form a folio of the Geologic Atlas of the United States. More than 200 folios have been published.

Index maps of each State and of Alaska and Hawaii showing the areas covered by topographic maps and geologic folios published by the United States Geological Survey may be obtained free. Copies of the standard topographic maps may be obtained for 10 cents each; some special maps are sold at different prices. A discount of 40 per cent is allowed on an order for maps amounting to \$5 or more. The geologic folios are sold for \$1.00 each, but the price varies depending on the size of the folio. Orders for folios will be sent on receipt of payment.

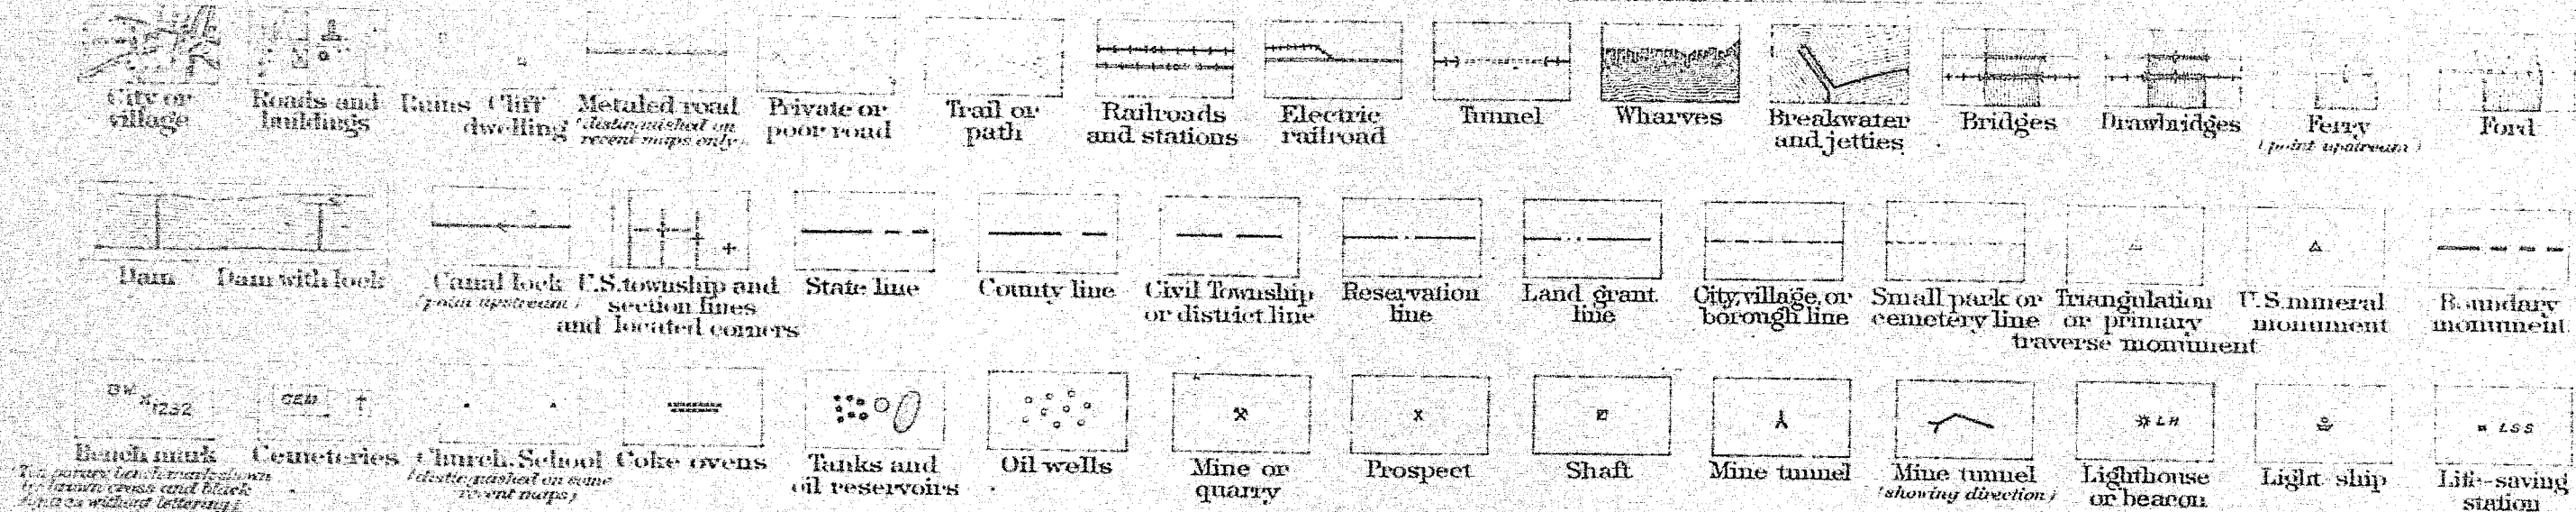

Applications for maps and folios should be accompanied by cash, draft, or money order for the amount and should be addressed to:

DESCRIPTION OF THE TOPOGRAPHIC MAP OF THE UNITED STATES

The United States Geological Survey is making a topographic map of the United States. This work has been in progress since 1882, and more than one-third of the area of the country, excluding outlying possessions, has been mapped. The mapped areas are widely scattered, nearly every State being represented, as shown on the progress maps accompanying each annual report of the Director.

This great map is being published in atlas sheets of convenient size, which are bounded by parallels and meridians. The four-cornered division of land corresponding to an atlas sheet is called a *quadrangle*. The sheets are of approximately the same size: the paper dimensions are 20 by 16½ inches; the map occupies about 17½ inches of height and 11½ to 16 inches of width, the latter varying with latitude. Three scales, however, are employed. The largest scale is 1:62500, or very nearly one mile to one inch; i. e., one linear mile on the ground is represented by one linear inch on the map. This scale is used for the thickly settled or industrially important parts of the country. For the greater part of the country an intermediate scale of 1:125000, or about two miles to one inch, is employed. A third and still smaller scale of 1:250000, or about four miles to one inch, has been used in the desert regions of the far West. A few special maps on larger scales are made of limited areas in mining districts. The sheets on the largest scale cover 15' of latitude by 15' of longitude; those on the intermediate scale, 30' of latitude by 30' of longitude; and those on the smallest scale, 1° of latitude by 1° of longitude.

The features shown on this map may, for convenience, be classed in three groups: (1) *natural*, including seas, lakes, ponds, rivers, and other streams, canals, swamps, etc.; (2) *cultural*, i. e., works of man, such as towns, cities, roads, railroads, boundaries, etc. The conventional signs used for these features are grouped below. Variations appear in some maps of earlier dates.

All water features are shown in *blue*, the smaller streams and canals in full blue lines, and the larger streams, lakes, and the sea by blue water-tinting. Certain streams, however, which flow during only a part of the year, their beds being dry at other

times, are shown, not by full lines, but by lines of dots and dashes. Ponds which are dry during a part of the year are shown by oblique parallel lines. Salt-water marshes are shown by horizontal ruling interspersed with tufts of blue, and fresh-water marshes and swamps by blue tufts with broken horizontal lines.

Relief is shown by contour lines in *brown*. Each contour passes through points which have the same altitude. One who follows a contour on the ground will go neither uphill nor downhill, but on a level. By the use of contours not only are the shapes of the plains, hills, and mountains shown, but also the elevations. The line of the seacoast itself is a contour line, the datum or zero of elevation being mean sea level. The contour line at, say, 20 feet above sea level is the line that would be the seacoast if the sea were to rise or the land to sink 20 feet. Such a line runs back into the valleys and forward around the points of hills and spurs. On a gentle slope this contour line is far from the present coast line, while on a steep slope it is near it. Thus a succession of these contour lines far apart on the map indicates a gentle slope; if close together, a steep slope; and if the contours run together in one line, as if each were vertically under the one above it, they indicate a cliff. In many parts of the country are depressions or hollows with no outlets. The contours of course surround these, just as they surround hills. Those small hollows known as sinks are usually indicated by hachures, or short dashes, on the inside of the curve. The contour interval, or the vertical distance in feet between one contour and the next, is stated at the bottom of each map. This interval varies according to the character of the area mapped: in a flat country it may be as small as 5 feet; in a mountainous region it may be 200 feet. Certain contours, usually every fifth one, are accompanied by figures stating elevation above sea level. The heights of many definite points, such as road corners, railroad crossings, railroad stations, summits, water surfaces, triangulation stations, and bench marks, are also given. The figures in each case are placed close to the point to which they apply, and express the elevation to the nearest foot only. The *exact* elevations of bench marks and

their descriptions, as well as the descriptions and geodetic coordinates of triangulation stations, are published in the annual reports and bulletins of the Survey. The publications pertaining to specified localities may be had on application.

The works of man are shown in *black*, in which color all lettering also is printed. Boundaries, such as State, county, city, land-grant, reservation, etc., are shown by broken lines of different kinds and weights. Houses are shown by small black squares which in the densely built portions of cities and towns merge into blocks. Roads are shown by fine double lines (full for the better roads, dotted for the inferior ones), trails by single dotted lines, and railroads by full black lines with cross lines. Other cultural features are represented by conventions which are easily understood.

The sheets composing the topographic atlas are designated by the name of a principal town or of some prominent natural feature within the quadrangle and the names of adjoining published sheets are printed on the margins. They are sold at five cents each when fewer than 100 copies are purchased, but when ordered in lots of 100 or more copies, whether of the same or of different sheets, the price is three cents each.

The topographic map is the base on which the facts of geology and the mineral resources of a quadrangle are represented. The topographic and geologic maps of a quadrangle are finally bound together, accompanied by a description of the district, to form a folio of the Geologic Atlas of the United States. The folios are sold at twenty-five cents each, excepting that such as are unusually comprehensive are priced accordingly.

Applications for the separate topographic maps or for folios of the Geologic Atlas should be accompanied by cash—the exact amount—or by post-office money order, and should be addressed to—

THE DIRECTOR,

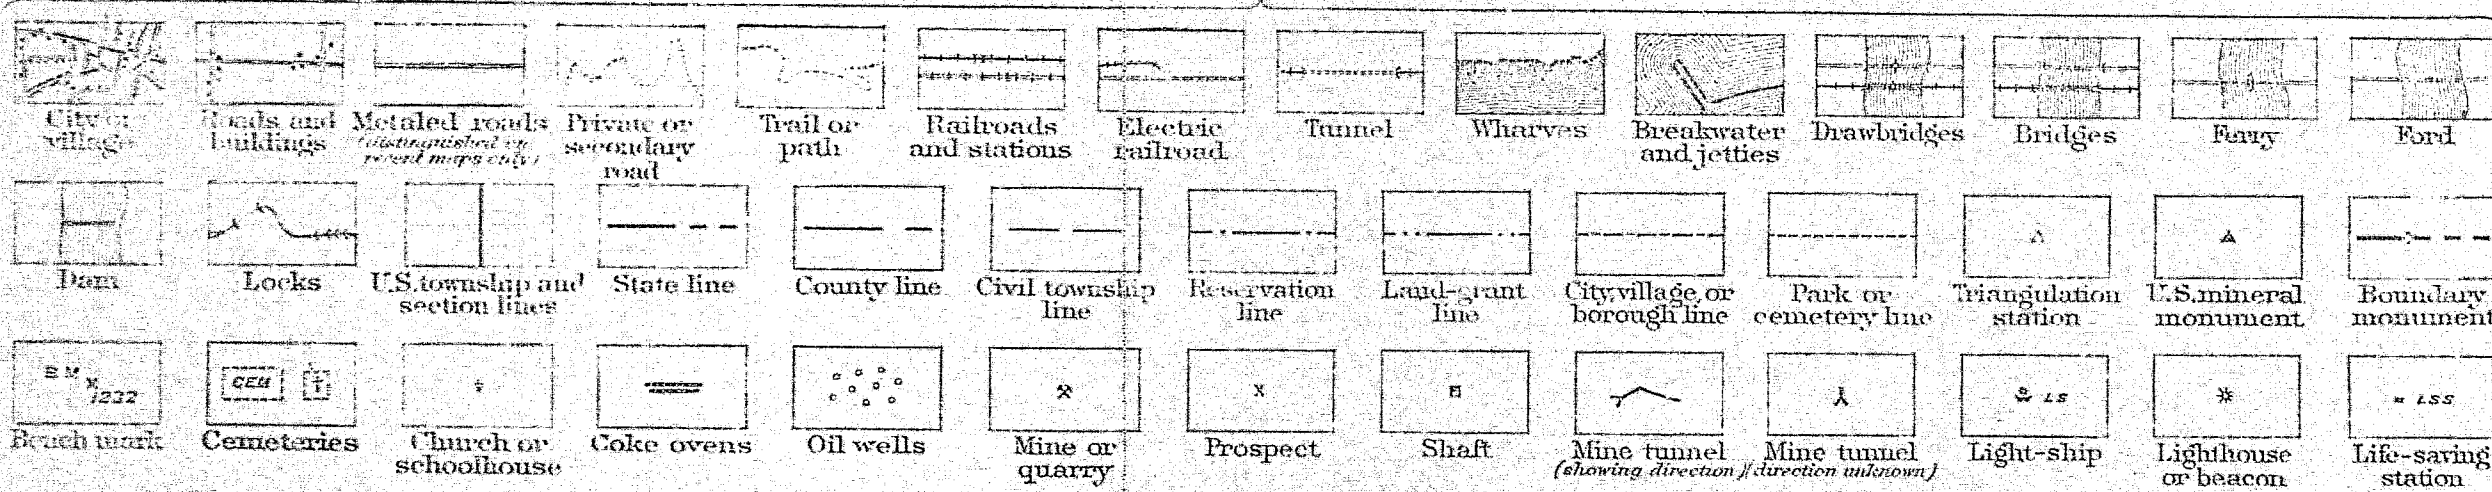

United States Geological Survey,

"SAVE THE LAKES OF MAINE!" A Consideration of Some Facts About the Storage of Water at the Rangeley Lakes and a Criticism of Some of the Union Water Power Company's Statements.

PROFILE OF OUTLET OF MOOSELUCMEGUNTIC LAKE

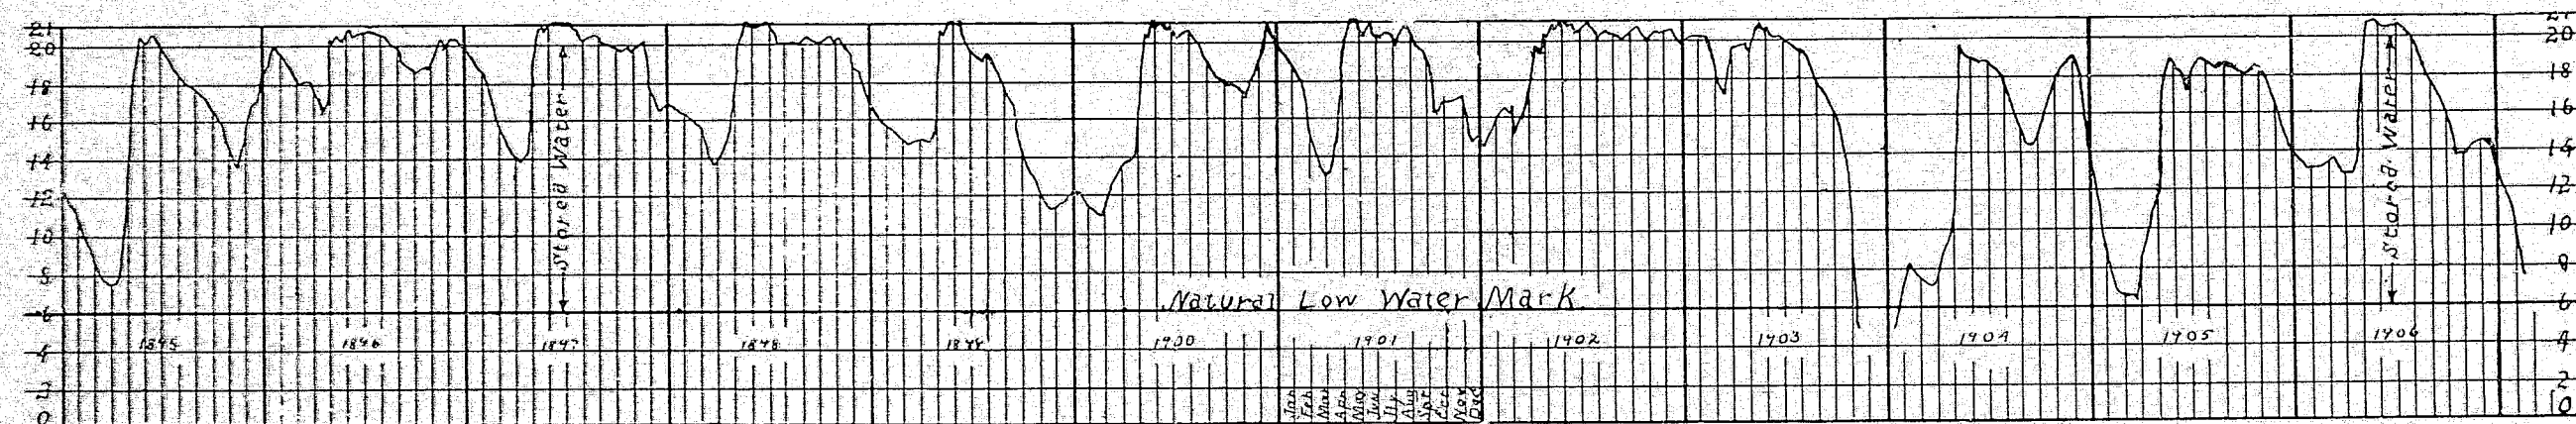

CHART OF WATER LEVELS FOR PAST 12 YEARS

To Editors of the Lewiston Journal:—
I note with great interest the arguments of Mr. Sawyer in your paper, also those of Mr. White in the Lewiston Sun. They evidently prefer it to be understood that this battle should be fought with facts and it unquestionably should be.

Have these gentlemen furnished to the best of their ability cold facts with which to represent their position and purposes? I say no emphatically and ask you and the public to judge from the evidence the two gentlemen have personally furnished.

In order to make these arguments clear I submit two sketches, one of which is the results of the readings of water levels of Mooselucmeguntic lake, for the past twelve years, and the other a profile of the outlet of Mooselucmeguntic lake, the data for same having been made within one week.

In a slight explanation of these maps, referring to the profile of outlet, the sill, natural dam, channel, etc., all of which are responsible for different water levels at different periods and under different conditions.

At the bottom of the profile you will note a series of figures placed at stated intervals across the entire sketch. These figures represent the distances in feet from the sill of Dam O, in either direction.

Each horizontal line across the face of sketch represents one foot and upon this special ruling are fixed the actual measurements taken and verified by a competent engineer, Mr. Henry Nelson of Rumford Falls.

Near the right hand end of the profile at the left of the words "The Pool," is located the sill in the dam of Mooselucmeguntic lake, this sill being located 21 feet down from high water line as represented by the heavy line at top of sketch marked 21 and designated by words, "High Water Line."

Now both Mr. Sawyer and Mr. White emphasized strongly at the committee meeting and in arguments since that time that the results of the proposed

dredging would draw down the water of the lakes to "PRACTICALLY" a level of 15 feet from high water line. As I have stated before, this point has been grossly misstated and the original bill if passed would have effected a 21-foot level where the arguments of our friends called for a 15-foot level.

Our friends in giving to the public all the data and records which they have collected for the past 28 years have suppressed the one important profile of the outlet and dams controlling water level on Mooselucmeguntic lake and why?

This was the first engineering step to take in asserting the practicability of such an action as dredging the channels in order to effect the results for which the bill was drafted to cover.

Why have they suppressed all this information their records might supply and the results of which would help more than any other thing to give light on the subject?

Simply this, THEY HAVE ALREADY TAKEN FROM THE PUBLIC WITHOUT PERMISSION OR AUTHORITY FROM ANY SOURCE, 2.5 FEET OF WATER BY MAKING A NEW CHANNEL, the extent of excavations of which can be determined from the chart. This was done by the gentlemen who ask for light on this subject, who want to consider "facts" and "fairness" only.

In order to exercise the full power of their bill if passed, they will be obliged to excavate only to a depth equal to that already taken by their artificial channel.

Their profile of this channel would have exposed this if presented and no man has ever heard them mention a profile of the channel which drains the Mooselucmeguntic, yet this profile would back them in their statements if they were true and made under the guidance of "fairness."

In Mr. White's communication in the Lewiston Sun, also in Mr. Sawyer's arguments in the Lewiston Journal, they state they have "unquestionable rights to 14 feet of water" on lake in question. Referring to profile, at extreme left will be noted the "natural

dam" which nature placed there and which is 13.7 feet below the ACTUAL high water line and 12.7 feet below the 20-foot level which these gentlemen, established to serve THROUGH THIS CONTEST ONLY, the true high water level and the level to which they hold to the best of their ability, the water of the lake, and to which level THE BUILDER OF THE DAM DESIGNED AS THE HIGH WATER LEVEL, being 21 feet from sill.

Now using the high water line which these gentlemen have adopted temporarily, they openly state in unrefracted statements that they have "undoubted rights to 14 feet of water."

The natural dam, being located 12.7 feet below THEIR high water line would give them "undisputed rights" to draw the waters of this lake 13 feet lower than the dam made by nature.

This is not all they claim, they agree that because of the large area of lake and because of the large feeding streams to lake, that the lake can be drawn down only to within about 2.5 feet from dam, which holds the waters back. I agree with them on this point of 2.5 feet because of my observations of the lake at times of low water, and from information given by those whose duty it is to look after the gates. Adding to this 2.5 feet which the parties to this argument seem to agree upon, to the NATURAL dam would establish a natural low water line 2.5 feet above natural dam which would leave the natural level 10 feet from THEIR high water line and 11 feet from actual high water line, yet they claim "unquestionable" 14 feet of water which necessitate the location of dam to effect this 14 feet of draft as they claim, 16.5 feet below THEIR 20 foot level and 17.5 feet below the ACTUAL high water line.

As a matter of fact and as their own water chart shows, their high water mark is at 21 feet, this fact is plain to any fair minded man, and the statement is supported by the party who built the dam as well as those whose duty it is to look after the dam and property at Upper Dam.

The water level chart which Mr. Sawyer was kind enough to loan me has established a 20 ft. level.

I have drawn the 21 ft. level in addition to level established by him, simply to show that the 21 ft. level is the high water level and that the company hold the water to this level as long as they can when possible and the chart shows that it is possible to do this in many instances.

Mr. Sawyer has established on this chart "Natural Low Water Line" at a level of 14 ft. from the 20 ft. level to 15 ft. from the 21 ft. level, yet they told the committee and others that they wished to draw the water down practically 15 feet and if their claims are true why do they seek legislation to draw "practically 15 feet" when their "undoubted rights" allow them to draw 15 ft. below the ACTUAL high water line without legislation?

Referring again to the chart you will note that between the years of 1893 and 1894 the water became very low.

When Mr. Sawyer loaned the chart he evidently saw the opportunity to add more "facts" and wrote with pen at the point in question the following words:—"Repairs at dam and investigation of channel."

It is a most natural supposition that Mr. Sawyer should not want the results of the records of an expert misunderstood and he evidently wished to inclose at this broken water line this connecting link so to further guard against the further "misleading" of the people. However, I wish to state that the "investigation of the channel" was effected with COFFER DAMS, SHOVELS AND PICKS, and at this very time a generous portion of the county of Oxford was removed from the channels in question as shown by people.

I ask those interested to follow the water level line from Jan. 1st, 1895, to the present time and after careful consideration decide if the lake has completely

filled for more than six years out of the 12 years which chart covers. I mean the ACTUAL high water level of 21 feet.

I also call your attention to the reference on the chart to the words: "Stored waters" covering by arrows the elevations of six to 20 ft. and satisfying yourself whether or not the "stored waters" limit would be at 20 or 21 ft. level.

You will note that in 1897 the water was held to the 21-foot level for about two months, also in 1898 it was held at this level for about one month and not over one inch below for almost another month, yet our expert hydraulic engineer states that the water held above 20 feet is not "effective."

Shall I assume from this that the water held above the 20-foot level would not serve the purpose of turning water wheels?

Would the force of gravity out of respect to Mr. Sawyer and his methods of "fairness" refuse to act upon this body of water as it passed thru the wheels at Lewiston, from the fact that he has termed this water as "NOT EFFECTIVE"?

Further, in reply to the appeal for fairness, I will ask if it would be an act of fairness to procure the pledge of a senator of the Legal Affairs committee? This gentleman told me that while he was with us in heart he was PLEDGED to the other side, from the first.

In conclusion I want to say that I believe there are two standards by which the weight of this question may be measured. One is the standard of dollars and cents. Use this standard of measurement and we are lost. The other is the standard of justice and equity, the standard by which we enjoy our liberty and the standard under which our property and rights are protected. Use this standard which is the standard of the people and upon which our great government is established and we win.

EDWIN S. CUMMINGS.

THE TOPOGRAPHIC MAPS OF THE UNITED STATES

The United States Geological Survey is making a standard topographic atlas of the United States. This work has been in progress since 1882, and its results consist of published maps of more than 40 per cent of the country, exclusive of outlying possessions.

This topographic atlas is published in the form of maps on sheets measuring about 14 1/2 by 20 inches. Under the general plan adopted the country is divided into quadrangles bounded by parallels of latitude and meridians of longitude. These quadrangles are mapped on different scales, the scale selected for each map being that which is best adapted to general use in the development of the country, and consequently, though the standard maps are of nearly uniform size, they represent areas of different sizes. On the lower margin of each map are printed graphic scales showing distances in feet, meters, and miles. In addition, the scale of the map is shown by a fraction expressing a fixed ratio between linear measurements on the map and corresponding distances on the ground. For example, the scale 1:25,000 means that 1 unit on the map (such as 1 inch, 1 foot, or 1 meter) represents 25,000 similar units on the earth's surface.

Although some areas are surveyed and some maps are compiled and published on special scales for special purposes, the standard topographic surveys for the United States proper and the resulting maps have for many years been divided into three types, differentiated as follows:

1. Surveys of areas in which there are problems of great public importance—retaining, for example, to mineral development, reclamation, or reclamation of swamp areas—are made with sufficient accuracy to be used in the publication of maps on a scale of 1:25,000 (1 inch=one-half mile), with a contour interval of 1, 5, or 10 feet.

2. Surveys of areas in which there are problems of average public importance, such as most of the basin of the Mississippi and its tributaries, are made with sufficient accuracy to be used in the publication of maps on a scale of 1:50,000 (1 inch=nearly 1 mile), with a contour interval of 10 to 25 feet.

3. Surveys of areas in which the problems are of minor public importance, such as much of the mountain or desert region of Arizona or New Mexico, are made with sufficient accuracy to be used in the publication of maps on a scale of 1:100,000 (1 inch=nearly 2 miles), with a contour interval of 25 to 100 feet.

A topographic survey of Alaska has been in progress since 1898, and nearly 37 per cent of its area has now been mapped. About 10 per cent of the Territory has been covered by reconnaissance maps on a scale of 1:250,000, or about 10 miles to an inch. Most of the remaining area surveyed in Alaska has been mapped on a scale of 1:500,000, but about 4,000 square miles has been mapped on a scale of 1:250,000.

About half of the Hawaiian Islands has been surveyed, and the resulting maps are published on a scale of 1:250,000.

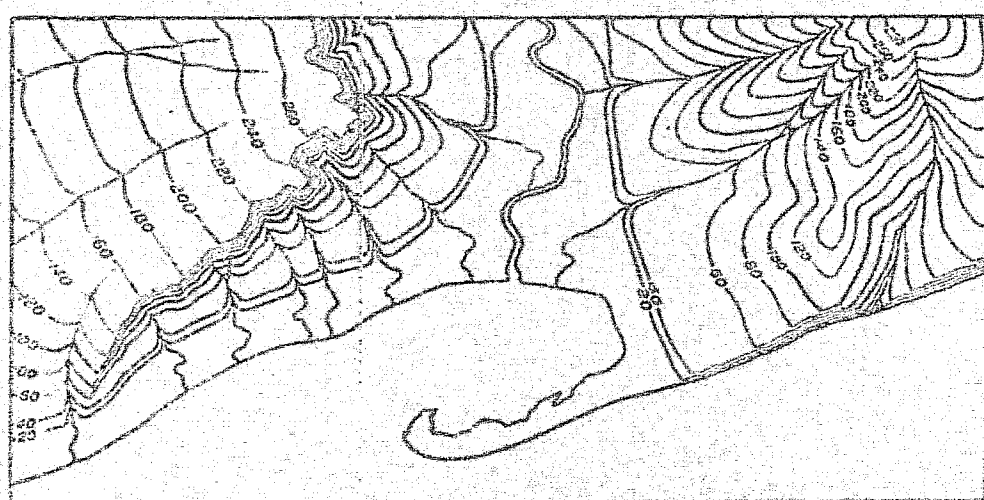

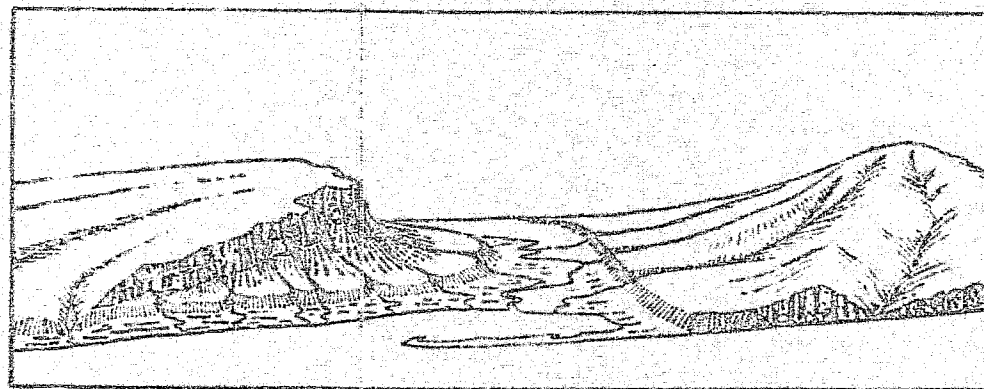

The features shown on these maps may be arranged in three groups—(1) water, including seas, lakes, rivers, canals, swamps, and other bodies of water; (2) relief, including mountains, hills, valleys, and other features of the land surface; (3) culture (works of man), such as towns, cities, roads, railroads, and

boundaries. The conventional signs used to represent these features are shown and explained below. Variations appear on some earlier maps, and additional features are represented on some special maps.

All the water features are represented in blue, the smaller streams and canals by single blue lines and the larger streams, the lakes, and the sea by blue water lining or blue tint. Intermittent streams—those whose beds are dry for a large part of the year—are shown by lines of blue dots and dashes.

Relief is shown by contour lines in brown, which on some maps are supplemented by shading showing the effect of light thrown from the north-west across the area represented, for the purpose of giving the appearance of relief and thus aiding in the interpretation of the contour lines. A contour line represents an imaginary line on the ground (a contour) every part of which is at the same altitude above sea level. Such a line could be drawn at any altitude, but in practice only the contours at certain regular intervals of altitude are shown. The line of the seacoast itself is a contour, the datum or zero of altitude being mean sea level. The 20-foot contour would be the shore line if the sea should rise 20 feet. Contour lines show the shape of the hills, mountains, and valleys, as well as their altitude. Successive contour lines that are far apart on the map indicate a gentle slope; lines that are close together indicate a steep slope; and lines that run together indicate a cliff.

The manner in which contour lines express altitude, form, and grade is shown in the figure below.

The sketch represents a river valley that lies between two hills. In the foreground is the sea, with a bay that is partly inclosed by a hooked sand bar. On each side of the valley is a terrace into which small streams have cut narrow gullies. The hill on the right has a rounded summit and gently sloping spurs separated by ravines. The spurs are truncated at

their lower ends by a sea cliff. The hill at the left terminates abruptly at the valley in a steep scarp, from which it slopes gradually away and forms an inclined table-land that is traversed by a few shallow gullies. On the map each of these features is represented, directly beneath its position in the sketch, by contour lines.

The contour interval, or the vertical distance in feet between one contour and the next, is stated at the bottom of each map. This interval differs according to the topography of the area mapped; in a flat country it may be as small as 1 foot; in a mountainous region it may be as great as 250 feet. Certain contour lines, every fourth or fifth one, are made heavier than the others and are accompanied by figures showing altitude. The heights of many points—such as road corners, summits, surfaces of lakes, and bench marks—are also given on the map in figures, which show altitudes to the nearest foot only. More exact altitudes—those of bench marks—as well as the geodetic coordinates of triangulation stations, are published in bulletins issued by the Geological Survey.

Lettering and the works of man are shown in black. Boundaries, such as those of a State, county, city, land grant, township, or reservation, are shown by continuous or broken lines of different kinds and weights. Metalled roads are shown by double lines, one of which is accentuated. Other public roads are shown by fine double lines, private and poor roads by dashed double lines, trails by dashed single lines.

Each quadrangle is designated by the name of a city, town, or prominent natural feature within it, and on the margins of the map are printed the names of adjoining quadrangles of which maps have been published. Over 3,000 quadrangles in the United States have been surveyed and maps of them similar to the one on the other side of this sheet have been published.

The topographic map is the base on which the geology and mineral resources of a quadrangle are represented, and the maps showing these features are bound together with a descriptive text to form a folio of the Geologic Atlas of the United States. More than 200 folios have been published.

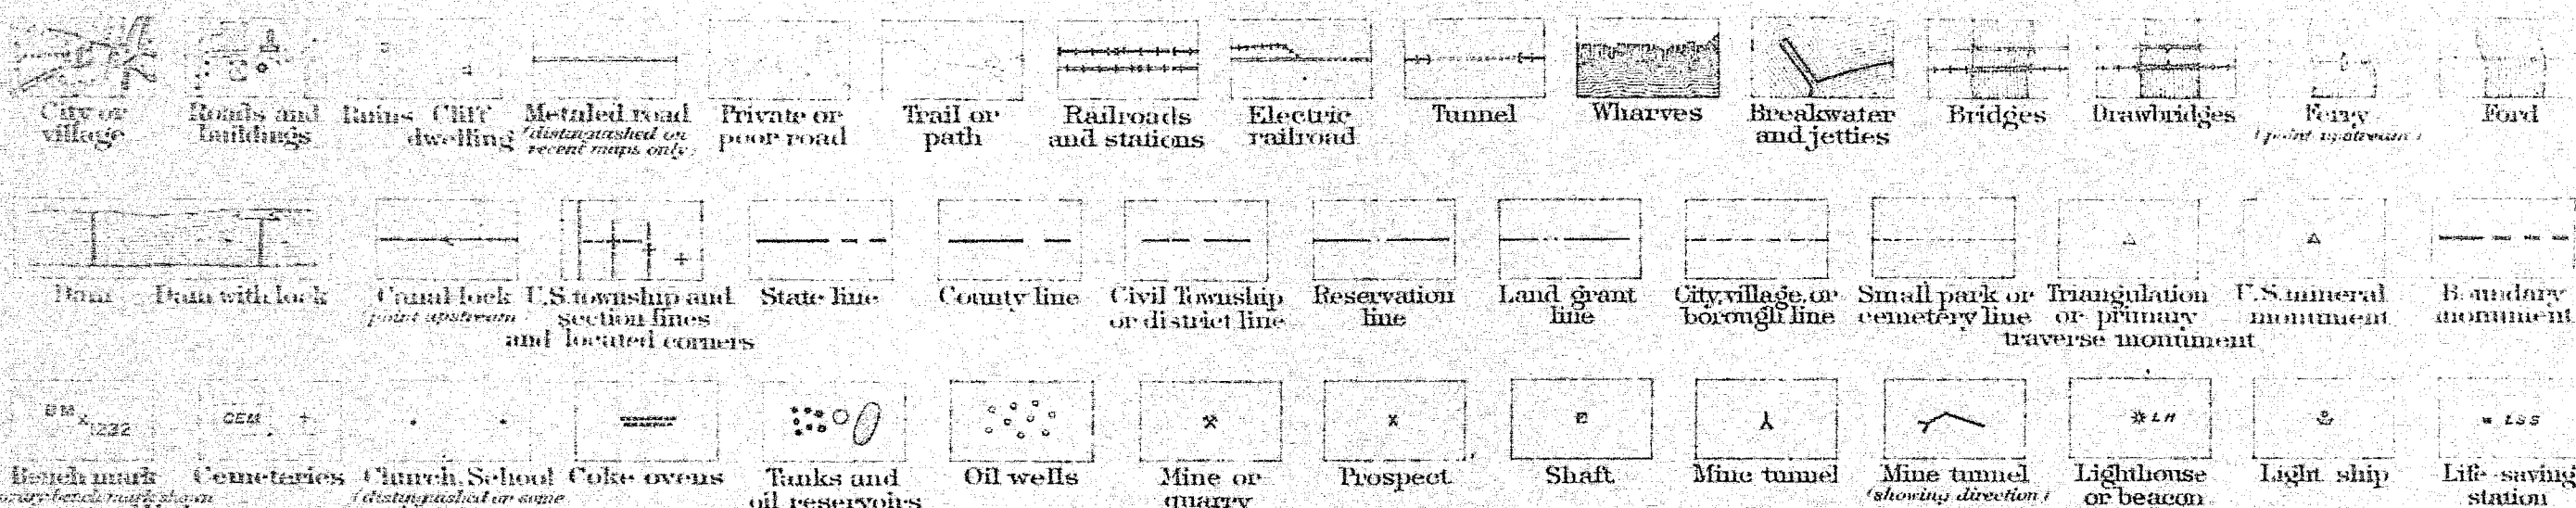

Index maps of each State and of Alaska and Hawaii showing the areas covered by topographic maps and geologic folios published by the United States Geological Survey may be obtained free. Copies of the standard topographic maps may be obtained for 10 cents each; some special maps are sold at different prices. A discount of 40 per cent is allowed on an order for maps amounting to \$5 or more. The geologic folios are sold for 50 cents each, but a discount of 40 per cent is allowed on an order for folios amounting to \$5 or more. The folios will be sent on request.

Applications for maps should be accompanied by cash, draft, or money order payable to the order of the Director, United States Geological Survey, Washington, D. C.

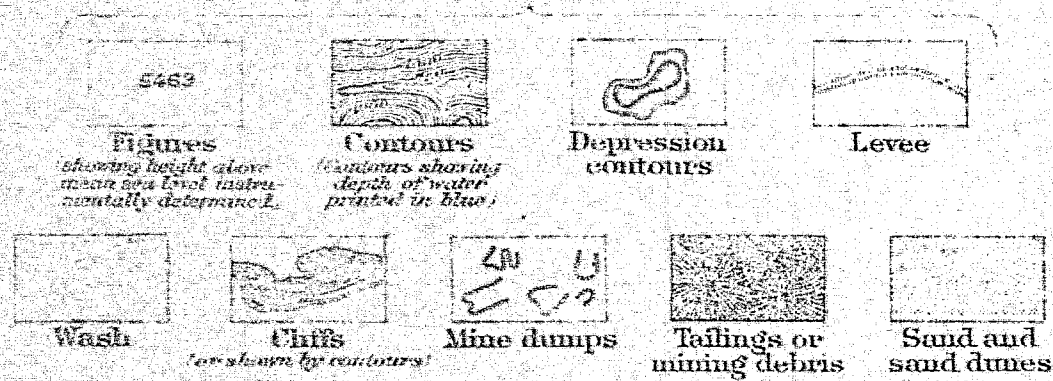

January, 1924.

THE TOPOGRAPHIC MAPS OF THE UNITED STATES

The United States Geological Survey is making a standard topographic map of the United States. This work has been in progress since 1882, and its results consist of published maps of more than 40 per cent of the country, exclusive of outlying possessions.

This topographic atlas is published in the form of maps on sheets measuring about 18 1/2 by 20 inches. Under the general plan adopted the country is divided into quadrangles bounded by parallels of latitude and meridians of longitude. These quadrangles are mapped on different scales, the scale selected for each map being that which is best adapted to general use in the development of the country, and consequently, though the standard maps are of nearly uniform size, they represent areas of different sizes. On the lower margin of each map are printed graphic scales showing distances in feet, meters, and miles. In addition, the scale of the map is shown by a fraction expressing a fixed ratio between linear measurements on the map and corresponding distances on the ground. For example, the scale 1 inch equals 1 mile on the map, such as 1 inch, 1 foot, or 1 meter, represents 62,500 similar units on the earth's surface.

Although some areas are surveyed and some maps are compiled and published on special scales for special purposes, the standard topographic surveys for the United States proper and the resulting maps have for many years been divided into three types, differentiated as follows:

1. Surveys of areas in which there are problems of great public importance—relating, for example, to mineral development, irrigation, or reclamation of swamp areas—are made with sufficient accuracy to be used in the publication of maps on a scale of 1 inch equals one-half mile, with a contour interval of 10, 20, or 30 feet.

2. Surveys of areas in which there are problems of average public importance, such as most of the basin of the Mississippi and its tributaries, are made with sufficient accuracy to be used in the publication of maps on a scale of 1 inch equals 1 mile, with a contour interval of 10 to 25 feet.

3. Surveys of areas in which the problems are of minor public importance, such as much of the mountain or desert region of Arizona or New Mexico, are made with sufficient accuracy to be used in the publication of maps on a scale of 1 inch equals nearly 2 miles, with a contour interval of 25 to 100 feet.

A topographic survey of Alaska has been in progress since 1898, and nearly 37 per cent of its area has now been mapped. About 10 per cent of the Territory has been covered by reconnaissance maps on a scale of 1 inch equals 10 miles to an inch. Most of the remaining area surveyed in Alaska has been mapped on a scale of 1 inch equals 2 miles, but about 4,000 square miles has been mapped on a scale of 1 inch equals 10 miles.

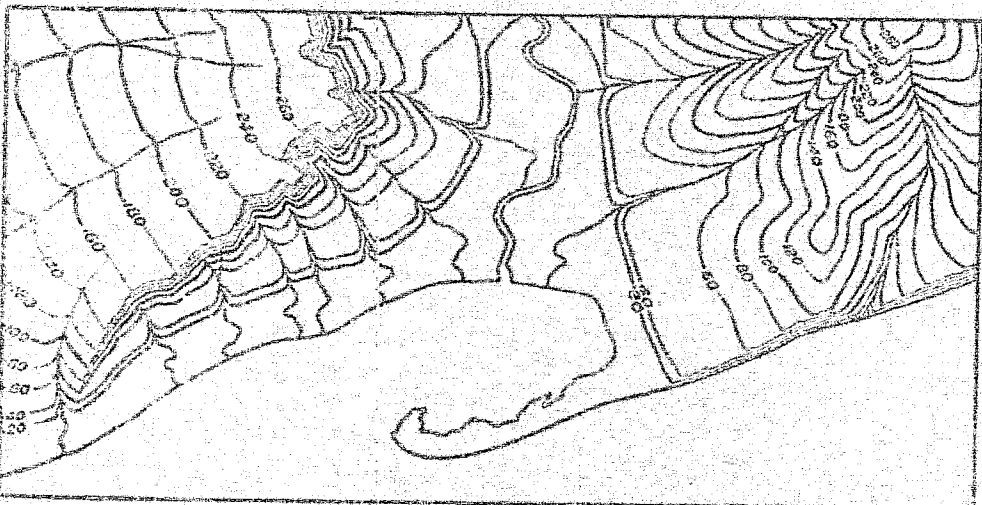

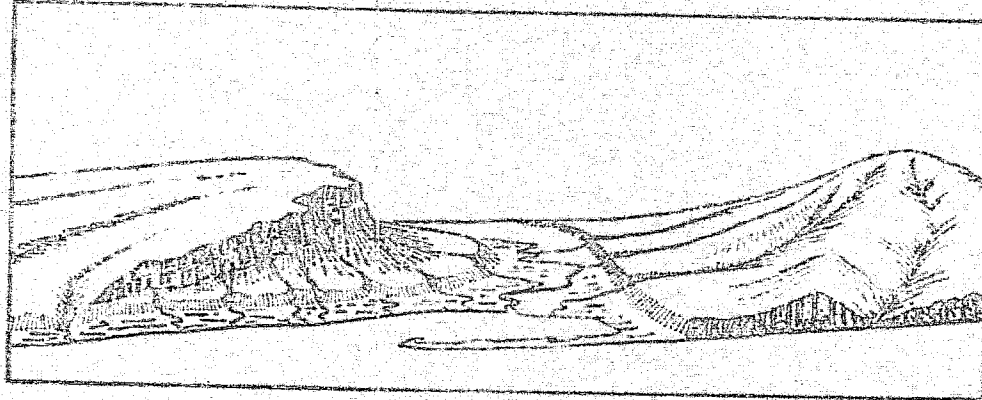

Almost half of the Hawaiian Islands has been surveyed, and the resulting maps are published on a scale of 1 inch equals 10 miles.

The features shown on these maps may be arranged in three groups: (1) water, including seas, lakes, rivers, canals, swamps, and other bodies of water; (2) relief, including mountains, hills, valleys, and other features of the land surface; (3) culture (works of man), such as towns, cities, roads, railroads, and

boundaries. The conventional signs used to represent these features are shown and explained below. Variations appear on some earlier maps, and additional features are represented on some special maps.

All the water features are represented in blue, the smaller streams and canals by single blue lines and the larger streams, the lakes, and the sea by blue water lining or blue tint. Intermittent streams—those whose beds are dry for a large part of the year—are shown by lines of blue dots and dashes.

Relief is shown by contour lines in brown, which on some maps are supplemented by shading showing the effect of light thrown from the north-west across the area represented, for the purpose of giving the appearance of relief and thus aiding in the interpretation of the contour lines. A contour line represents an imaginary line on the ground (a contour) every part of which is at the same altitude above sea level. Such a line could be drawn at any altitude, but in practice only the contours at certain regular intervals of altitude are shown. The line of the seacoast itself is a contour, the datum or zero of altitude being mean sea level. The 20-foot contour would be the shore line if the sea should rise 20 feet. Contour lines show the shape of the hills, mountains, and valleys, as well as their altitude. Successive contour lines that are far apart on the map indicate a gentle slope; lines that are close together indicate a steep slope; and lines that run together indicate a cliff. The manner in which contour lines express altitude, form, and grade is shown in the figure below.

The sketch represents a river valley that lies between two hills. In the foreground is the sea, with a bay that is partly inclosed by a hooked sand bar. On each side of the valley is a terrace into which small streams have cut narrow gullies. The hill on the right has a rounded summit and gently sloping spurs separated by ravines. The spurs are truncated at

their lower ends by a sea cliff. The hill at the left terminates abruptly at the valley in a steep scarp, from which it slopes gradually away and forms an inclined table-land that is traversed by a few shallow gullies. On the map each of these features is represented, directly beneath its position in the sketch, by contour lines.

The contour interval, or the vertical distance in feet between one contour and the next, is stated at the bottom of each map. This interval differs according to the topography of the area mapped: in a flat country it may be as small as 1 foot; in a mountainous region it may be as great as 250 feet. Certain contour lines, every fourth or fifth one, are made heavier than the others and are accompanied by figures showing altitude. The heights of many points—such as road corners, summits, surfaces of lakes, and bench marks—are also given on the map in figures, which show altitudes to the nearest foot only. More exact altitudes—those of bench marks—as well as the geodetic coordinates of triangulation stations, are published in bulletins issued by the Geological Survey.

Lettering and the works of man are shown in black. Boundaries, such as those of a State, county, city, land grant, township, or reservation, are shown by continuous or broken lines of different kinds and weights. Metalled roads are shown by double lines, one of which is accentuated. Other public roads are shown by fine double lines, private and poor roads by dashed double lines, trails by dashed single lines.

Each quadrangle is designated by the name of a city, town, or prominent natural feature within it, and on the margins of the map are printed the names of adjoining quadrangles of which maps have been published. Over 3,000 quadrangles in the United States have been surveyed, and maps of them similar to the one on the other side of this sheet have been published.

The topographic map is the base on which the geology and mineral resources of a quadrangle are represented, and the maps showing these features are bound together with a descriptive text to form a folio of the Geologic Atlas of the United States. More than 200 folios have been published.

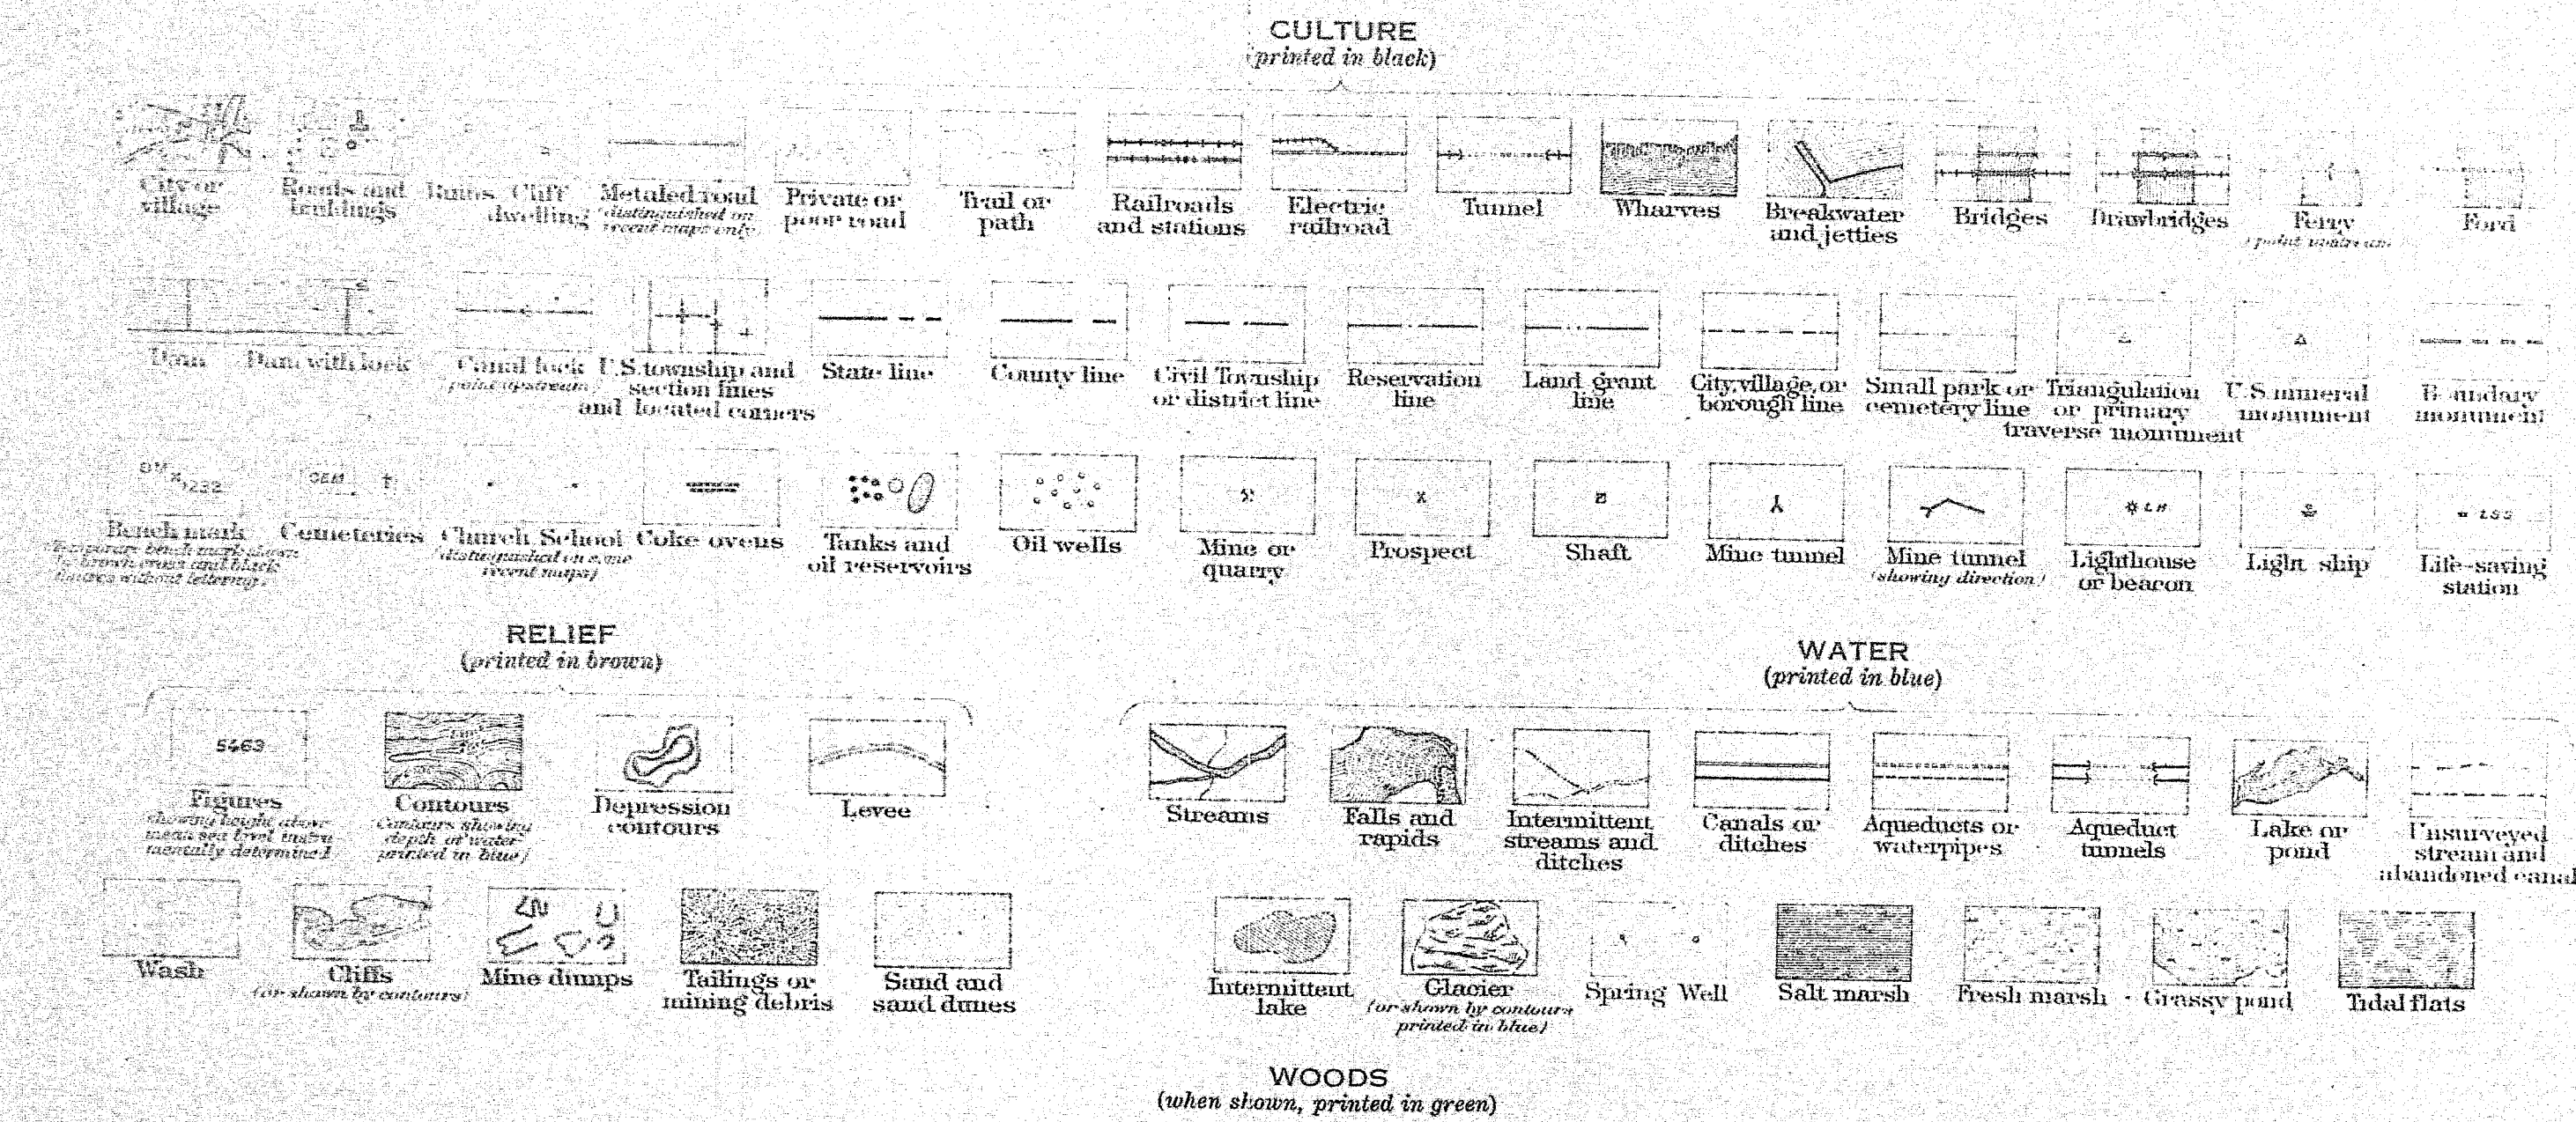

Index maps of each State and of Alaska and Hawaii showing the areas covered by topographic maps and geologic folios published by the United States Geological Survey may be obtained free. Copies of the standard topographic maps may be obtained for 10 cents each; some special maps are sold at different prices. A discount of 40 per cent is allowed on an order for maps amounting to \$5 or more at wholesale prices. The geologic folios are sold for 25 cents each, or for \$2.50 per folio, depending on the size of the map. The price of the folios will be sent on request.

Applications for maps or folios should be accompanied by cash, draft, or postal note, and no order should be addressed to the Chief of the Geological Survey.

U.S. GEOLOGICAL SURVEY
CHARLES D. WALCOTT, DIRECTOR.

MAINE
NORWAY SHEET

Henry Gannett, Chief Topographer.
H.M. Wilson, Chief Geographer in charge.
Triangulation by G.T. Hawkins.
Topography by W.H. Lovell.
Surveyed in 1894.

Scale 62500
4 Miles
3 Kilometers
Contour Interval 20 feet
Datum is mean Sea level

Edition of Nov. 1896.

DESCRIPTION OF THE TOPOGRAPHIC MAP OF THE UNITED STATES.

The United States Geological Survey is making a topographic map of the United States. This work has been in progress since 1882, and about one-fifth of the area of the country, excluding Alaska, has been mapped. The mapped areas are widely scattered, nearly every State being represented, as shown on the progress map accompanying each annual report of the Director.

The sheets of which this great map is composed are of approximately the same size: the paper dimensions are 20 by 16½ inches; the map occupies about 17½ inches of height and 11½ to 16 inches of width, the latter varying with latitude. Three scales, however, are employed. The largest scale is 1:62,500, or very nearly one mile to one inch, *i. e.*, one linear mile on the ground is represented by one linear inch on the map. This scale is used for the thickly settled or industrially important parts of the country. For the greater part of the country an intermediate scale of 1:125,000, or about two miles to one inch, is employed. A third and still smaller scale of 1:250,000, or about four miles to one inch, has been used in the desert regions of the far West. A few special maps on larger scales are made of limited areas in mining districts. The sheets upon the largest scale cover 15° of latitude by 15° of longitude; those upon the intermediate scale, 30° of latitude by 30° of longitude; and those upon the smallest scale, 1° of latitude by 1° of longitude.

The features shown on this map may, for convenience, be classed in three groups: (1) *water*, including seas, lakes, ponds, rivers and other streams, canals, swamps, etc.; (2) *relief*, including mountains, hills, valleys, cliffs, etc.; (3) *culture*, *i. e.*, the works of man, such as towns, cities, roads, railroads, boundaries, etc.

All water features are shown in *blue*, the smaller streams and canals in full blue lines, and the larger streams, lakes, and the sea by blue water-lining. Certain streams, however, which flow during only a part of the year, being dry at other times, are shown, not by full, but by dotted lines. Similarly, ponds which are dry during a part of the year are shown by blue parallel ruling. Salt-water marshes are shown by broken horizontal lines interspersed with tufts of blue, and fresh-water marshes by blue tufts without the lines.

The land features of the relief, commonly represented on maps by shading of some sort, either

with pen or brush, are here shown by contour lines in *brown*, each contour line being throughout its extent at a constant elevation above sea-level. By their use not only is the form of the relief shown, but also its amount, *i. e.*, the elevation. The line of the sea-coast itself is a contour line, the datum or zero of elevation being mean sea-level. The contour line at, say, 20 feet above sea-level is the line that would be the sea-coast if the sea were to rise or the land to sink 20 feet. Such a line runs back up the valleys and forward around the points of hills and spurs. On a gentle slope this contour line is far away from the present coast line, while on a steep slope it is close to it. Thus a succession of these contour lines far apart on the map indicates a gentle slope; if close together, a steep slope; and if they run together in one line, as if each contour were vertically under the one above it, they indicate a cliff. In many parts of the country are depressions or hollows with no outlets known as sinks. The contours of course surround these, just as they surround hills. Those small hollows are indicated by hachures or short dashes on the inside of the curve. Numbers printed in brown, showing the elevation of the contours and of various prominent features, are freely scattered over the map.

The works of man are shown in *black*, in which color all lettering also is printed. Boundaries, such as State, county, city, land-grant, reservation, etc., are shown by broken lines of different kinds and weights. Cities are indicated by black blocks, representing the built up portions, and country houses by small black squares. Roads are shown by fine double lines, either full for the better or dotted for the inferior roads, and trails by single dotted lines; railroads by full black lines with cross lines. Other cultural features are represented by conventions easily understood.

The separate sheets which compose the topographic atlas are sold at five cents each, this price being a slight advance over the cost of paper and printing. Applications for them, accompanied by post-office money order, should be addressed to—

THE DIRECTOR,
United States Geological Survey,
Washington, D. C.

December, 1896.
